Statistical Methods in Epidemiology Harold A. Kahn, Christopher T. Sempos, 1989 This book is an expanded version of the Kahn's widely used text *An Introduction to Epidemiologic Methods* Oxford 1983 It provides clear insight into the basic statistical tools used in epidemiology and is written so that those without advanced statistical training can comprehend the ideas underlying the analytical techniques The authors emphasize the extent to which similar results are obtained from different methods both simple and complex To this edition they have added a new chapter on Comparison of Numerical Results for Various Methods of Adjustment and also one on The Primacy of Data Collection New topics include the Kaplan Meier product limit method and the Cox proportional hazards model for analysis of time related outcomes An appendix of data from the Framingham Heart Study is used to illustrate the application of various analytical methods to an identical set of real data and provides source material for student exercises The text has been updated throughout

BOOK ALONE: STATISTICAL METHODS IN EPIDEMIOLOGY RESEARCH Ray M. Merrill, 2015-08-03 With the many advances in the control of infectious disease over the last 100 years the role of epidemiology in public health has transformed significantly Epidemiologic research now includes the study of acute and chronic diseases as well as the events behaviors and conditions associated with health From seasoned author Ray Merrill this text explores how epidemiologic methods are conducted and interpreted In four sections *Statistical Methods in Epidemiologic Research* covers basic concepts in epidemiology and statistics study designs statistical techniques and applications as well as special topics Key Features Includes sections on how specific epidemiologic methods have resulted in findings that have influenced health policy and public health Offers optional sections involving more advanced methods At the end of each chapter an applications section gives the student a clear picture of how epidemiologic methods are applied in real world situations Special emphasis is given to interpreting results SAS code is presented in an appendix that corresponds to assessing selected methods

Statistics in Epidemiology Hardeo Sahai, Anwer Khurshid, 1995-12-21 Epidemiologic studies provide research strategies for investigating

public health and scientific questions relating to the factors that cause and prevent ailments in human populations *Statistics in Epidemiology Methods Techniques and Applications* presents a comprehensive review of the wide range of principles methods and techniques underlying prospective retrospective and cross sectional approaches to epidemiologic studies Written for epidemiologists and other researchers without extensive backgrounds in statistics this new book provides a clear and concise description of the statistical tools used in epidemiology Emphasis is given to the application of these statistical tools and examples are provided to illustrate direct methods for applying common statistical techniques in order to obtain solutions to problems *Statistics in Epidemiology Methods Techniques and Applications* goes beyond the elementary material found in basic epidemiology and biostatistics books and provides a detailed account of techniques *Modern Methods for Epidemiology* Yu-Kang Tu, Darren C. Greenwood, 2012-05-22 Routine applications of advanced statistical methods on real data have become possible in the last ten years because desktop computers have become much more powerful and cheaper However proper understanding of the challenging statistical theory behind those methods remains essential for correct application and interpretation and rarely seen in the medical literature *Modern Methods for Epidemiology* provides a concise introduction to recent development in statistical methodologies for epidemiological and biomedical researchers Many of these methods have become indispensable tools for researchers working in epidemiology and medicine but are rarely discussed in details by standard textbooks of biostatistics or epidemiology Contributors of this book are experienced researchers and experts in their respective fields This textbook provides a solid starting point for those who are new to epidemiology and for those looking for guidance in more modern statistical approaches to observational epidemiology Epidemiological and biomedical researchers who wish to overcome the mathematical barrier of applying those methods to their research will find this book an accessible and helpful reference for self learning and research This book is also a good source for teaching postgraduate students in medical statistics or epidemiology **Statistical Methods for Global Health and Epidemiology** Xinguang Chen, (Din) Ding-Geng Chen, 2020-04-13 This book examines statistical methods and models used in the fields of global health and epidemiology It includes methods such as innovative probability sampling data harmonization and encryption and advanced descriptive analytical and monitory methods Program codes using R are included as well as real data examples Contemporary global health and epidemiology involves a myriad of medical and health challenges including inequality of treatment the HIV AIDS epidemic and its subsequent control the flu cancer tobacco control drug use and environmental pollution In addition to its vast scales and telescopic perspective addressing global health concerns often involves examining resource limited populations with large geographic socioeconomic diversities Therefore advancing global health requires new epidemiological design new data and new methods for sampling data processing and statistical analysis This book provides global health researchers with methods that will enable access to and utilization of existing data Featuring contributions from both epidemiological and biostatistical scholars this book is a practical resource

for researchers practitioners and students in solving global health problems in research education training and consultation

Statistical Analysis of Epidemiologic Data Steve Selvin, 2004-05-13 Analytic procedures suitable for the study of human disease are scattered throughout the statistical and epidemiologic literature Explanations of their properties are frequently presented in mathematical and theoretical language This well established text gives readers a clear understanding of the statistical methods that are widely used in epidemiologic research without depending on advanced mathematical or statistical theory By applying these methods to actual data Selvin reveals the strengths and weaknesses of each analytic approach He combines techniques from the fields of statistics biostatistics demography and epidemiology to present a comprehensive overview that does not require computational details of the statistical techniques described For the Third Edition Selvin took out some old material e g the section on rarely used cross over designs and added new material e g sections on frequently used contingency table analysis Throughout the text he enriched existing discussions with new elements including the analysis of multi level categorical data and simple intuitive arguments that exponential survival times cause the hazard function to be constant He added a dozen new applied examples to illustrate such topics as the pitfalls of proportional mortality data the analysis of matched pair categorical data and the age adjustment of mortality rates based on statistical models The most important new feature is a chapter on Poisson regression analysis This essential statistical tool permits the multivariable analysis of rates probabilities and counts *Epidemiological Research Methods* Donald R.

McNeil, 1996-08-06 The concepts of epidemiology the science that uses statistical methods to investigate associations between risk factors and disease outcomes in human populations are developed using examples involving real data from published studies The relevant statistical methods are developed systematically to provide an integrated approach to observational and experimental studies After covering basic measurement study design and study credibility issues the author continues with basic statistical methods and techniques for adjusting risk estimates for confounders Statistical models including logistic regression and the proportional hazards model for survival analysis are explained in detail in the following chapters concluding with an explanation of the general methods for determining the sample size and power requirements for an epidemiological study Taking advantage of the power accessibility and user friendliness of modern computer packages the author uses a variety of interesting data sets and graphical displays to illustrate the methods *Epidemiological Research Methods* will be of interest to students and research workers who need to learn and appreciate modern approaches to the subject Without unnecessary emphasis on mathematics or theory the book will enable the reader to gain a greater level of understanding of the underlying methods than is normally provided in books on epidemiology *Essential Statistical Methods for Medical Statistics* J. Philip Miller, 2010-11-08 *Essential Statistical Methods for Medical Statistics* presents only key contributions which have been selected from the volume in the *Handbook of Statistics Medical Statistics Volume 27* 2009 While the use of statistics in these fields has a long and rich history the explosive growth of science in general and of clinical

and epidemiological sciences in particular has led to the development of new methods and innovative adaptations of standard methods This volume is appropriately focused for individuals working in these fields Contributors are internationally renowned experts in their respective areas Contributors are internationally renowned experts in their respective areas Addresses emerging statistical challenges in epidemiological biomedical and pharmaceutical research Methods for assessing Biomarkers analysis of competing risks Clinical trials including sequential and group sequential crossover designs cluster randomized and adaptive designs Structural equations modelling and longitudinal data analysis Statistical Methods in Spatial Epidemiology Andrew B.
