Stochastic Processes, Statistical Methods, and Engineering Mathematics

Anatoliy Malyarenko,Ying Ni,Milica Rančić,Sergei Silvestrov,2023-01-26 The goal of the 2019 conference on Stochastic Processes and Algebraic Structures held in SPAS2019 V ster s Sweden from September 30th to October 2nd 2019 was to showcase the frontiers of research in several important areas of mathematics mathematical statistics and its applications The conference was organized around the following topics 1 Stochastic processes and modern statistical methods 2 Engineering mathematics 3 Algebraic structures and their applications The conference brought together a select group of scientists researchers and practitioners from the industry who are actively contributing to the theory and applications of stochastic and algebraic structures methods and models The conference provided early stage researchers with the opportunity to learn from leaders in the field to present their research as well as to establish valuable research contacts in order to initiate collaborations in Sweden and abroad New methods for pricing sophisticated financial derivatives limit theorems for stochastic processes advanced methods for statistical analysis of financial data and modern computational methods in various areas of applied science can be found in this book The principal reason for the growing interest in these questions comes from the fact that we are living in an extremely rapidly changing and challenging environment This requires the quick introduction of new methods coming from different areas of applied science Advanced concepts in the book are illustrated in simple form with the help of tables and figures Most of the papers are self contained and thus ideally suitable for self study Solutions to sophisticated problems located at the intersection of various theoretical and applied areas of the natural sciences are presented in these proceedings

Statistical Methods and Calculation Skills Isabel Willemse,2009 This third edition aims to equip students with the skills to apply statistical analysis and quantitative techniques in research and the working environment where their knowledge can lead to effective decision making The book effectively combines theory and practice in providing A theoretical framework for statistical problem solving A practical step by step approach to applying methods and calculations A complete list of outcomes in each unit Worked examples with detailed explanations Practice in

the form of guided activities and a range of self test questions The contents include the collection and presentation of data descriptive measures index numbers regression and correlation analysis time series probability and probability distributions statistical estimation and hypothesis testing Calculation skills are revised in Part 2 a section that covers technology elementary calculations percentages and ratios equations graph construction and interest calculations This edition includes examples and activities which cover not only the business field but also food and biotechnology engineering medicine and environmental studies
