environmental aspects in our socio economic systems require solutions designed for the sustainability of our society These conditions imply that Big Data must contribute to evaluating our current situation actions and changes to continuously change our behavior and society based on a Plan Do Check Action PDCA cycle The PDCA cycle also known as the Deming cycle is a four step management method used to improve processes and products continuously We must understand how to construct a platform by using Big Data to do so Thus extracting meaningful information from Big Data is crucially important in the advanced information society This book provides case studies based on Grid Square statistics It shows their applications to socio economic and environmental problems such as tourism where we analyze visitor patterns to optimize resource allocation SDGs indicator where we monitor the sustainability of our socio economic systems and disaster management where we face natural disaster to enhance preparedness Finally the book proposes a World Grid Square Statistics Reference Architecture for constructing data applications across organizations and domains and reports on design concepts system architecture and the implication of a data platform for World Grid Square data and statistics

Mathematical Statistics Dieter Rasch,Dieter Schott,2018-01-10 Explores mathematical statistics in its entirety from the fundamentals to modern methods This book introduces readers to point estimation confidence intervals and statistical tests Based on the general theory of linear models it provides an in depth overview of the following analysis of variance ANOVA for models with fixed random and mixed effects regression analysis is also first presented for linear models with fixed random and mixed effects before being expanded to nonlinear models statistical multi decision problems like statistical selection procedures Bechhofer and Gupta and sequential tests and design of experiments from a mathematical statistical point of view Most analysis methods have been supplemented by formulae for minimal sample sizes The chapters also contain exercises with hints for solutions Translated from the successful German text Mathematical Statistics requires knowledge of probability theory combinatorics probability distributions functions and sequences of random variables which is typically taught in the earlier semesters of scientific and mathematical study courses It teaches readers all about statistical analysis and covers the design of experiments The book also describes optimal allocation in the chapters on regression analysis Additionally it features a chapter devoted solely to experimental designs Classroom tested with exercises included Practice oriented taken from day to day statistical work of the authors Includes further studies including design of experiments and sample sizing Presents and uses IBM SPSS Statistics 24 for practical calculations of data Mathematical Statistics is a recommended text for advanced students and practitioners of math probability and statistics *Statistics for Business and Economics* William E.
