The second part of the book contains additional information on the specific health and performance conditions that affect the voice and their assessment and treatment. It considers the medical and nonmedical issues affecting the human voice, including diagnosis and treatment of voice problems, the effects of physical injury, posture, pollutants, and irritants, psychological effects, voice therapy, medication, and more. New to this edition: New chapters on topics such as pedagogy for children, the importance of studying music, laryngeal issues involving wind instrument performance, high-speed digital imaging, the evolution of technology, pediatric voice disorders, thyroid disorders, the vocal effects of birth control medications, and autoimmune disorders. Many chapters have been extensively revised to update previous content and add new information on material such as choral pedagogy for geriatric singers, World Trade Center syndrome, and laryngeal effects of asbestos exposure. Chapters on medications for performers have been revised to delete medications no longer used frequently and to add various medications and drug classes that were not included previously, as well as information on alternative and complementary medicines. References have been updated throughout to include discussion of new studies and a review of the latest literature while also retaining the classic literature.
