Lehar,2003-01-30 The World In Your Head A Gestalt View of the Mechanism of Conscious Experience represents a bold assault on one of the greatest unsolved mysteries in science the nature of consciousness and the human mind Rather than examining the brain and nervous system to see what they tell us about the mind this book begins with an examination of conscious experience to see what it can tell us about the brain Through this analysis the first and most obvious observation is that consciousness appears as a volumetric spatial void containing colored objects and surfaces This reveals that the representation in the brain takes the form of an explicit volumetric spatial model of external reality Therefore the world we see around us is not the real world itself but merely a miniature virtual reality replica of that world in an internal representation In fact the phenomena of dreams and hallucinations clearly demonstrate the capacity of the brain to construct complete virtual worlds even in the absence of sensory input Perception is somewhat like a guided hallucination based on sensory stimulation This insight allows us to examine the world of visual experience not as scientists exploring the external world but as perceptual scientists examining a rich and complex internal representation This unique approach to investigating mental function has implications in a wide variety of related fields including the nature of language and abstract thought and motor control and behavior It also has implications to the world of music art and dance showing how the patterns of regularity and periodicity in space and time apparent in those aesthetic domains reflect the periodic basis set of the underlying harmonic resonance representation in the brain Perceptual Organization for Artificial Vision Systems Kim L. Boyer,Sudeep Sarkar,2012-12-06 Perceptual Organization for Artificial Vision Systems is an edited collection of invited contributions based on papers presented at The Workshop on Perceptual Organization in Computer Vision held in Corfu Greece in September 1999 The theme of the workshop was Assessing the State of the Community and Charting New Research Directions Perceptual organization can be defined as the ability to impose structural regularity on sensory data so as to group sensory primitives arising from a common underlying cause This book explores new models theories and algorithms for perceptual organization Perceptual Organization for Artificial Vision Systems includes contributions by the world s leading researchers in the field It explores new models theories and algorithms for perceptual organization as well as demonstrates the means for bringing research results and theoretical principles to fruition in the construction of computer vision systems The focus of this collection is on the design of artificial vision systems The chapters comprise contributions from researchers in both computer vision and human vision **PC Mag** ,1989-03-28 PCMag com is a leading authority on
