Somatic Selection And Adaptive Evolution:

Somatic Selection and Adaptive Evolution E.J. Steele,2012-12-06 The origins of the idea to write this book are impossible to trace What I can say with some certainty is that the book would not have emerged without the pleasing interplay of two contingent pleasures which occurred in the summer of 1978 The first was the penetrating sense of awe experienced when I finished reading Koestler s recent book Janus A Summing Up 1978 His philosophy provided that necessary inspiration to tackle in a rational way a long held dissatisfaction with the conventional Darwinian explanation of evolution The second was the more subliminal pleasure of camping and exploring that beautiful panorama of the lake district of Northern Ontario The book written in an argumentative style reviews the case for the inheritance of acquired characteristics and proposes a simple feasible mechanism to drive this process It is written from the narrow perspective of an experimental Immunologist with an interest in the evolution of multicellular organisms Much attention is given to current ideas in Immunology and at times we dive deeply into its heartland to grasp those threads relevant to a general theory of evolution In these excursions I take pains not to lose the general reader although I run the risk of annoying some Immunologists I do this so that the argument is understood by Biologists as a whole This narrow approach path however eliminates areas of interest to some Biologists e g

The Evolution of Darwinism Timothy Shanahan,2004-03-15 No other scientific theory has had as tremendous an impact on our understanding of the world as Darwin s theory as outlined in his Origin of Species yet from the very beginning the theory has been subject to controversy The Evolution of Darwinism first published in 2004 focuses on three issues of debate the nature of selection the nature and scope of adaptation and the question of evolutionary progress It traces the varying interpretations to which these issues were subjected from the beginning and the fierce contemporary debates that still rage on and explores their implications for the greatest questions of all Where we come from who we are and where we might be heading Written in a clear and non technical style this book will be of use as a textbook for students in the philosophy of science who need to become familiar with the background to the debates about evolution

Evolutionary Processes and Metaphors Mae-Wan Ho,Sidney W. Fox,1988-06-03 Evolutionary Processes and Metaphors Edited by Mae Wan Ho Department of Biology The Open University UK Sidney W Fox Institute for Molecular and Cellular Evolution University of Miami USA The current evolutionary debate encompasses protobiotic chemistry at one extreme and human sociobiology at the other Meanwhile significant advances continue to be made in many scientific disciplines which have far reaching implications on our view of nature Although it is now generally felt that neo Darwinism at least in its orthodox form is no longer an adequate theory of evolution very few attempts have yet been made to articulate a coherent alternative out of the many voices of dissent The purpose of the present volume is two fold to work towards a new evolutionary synthesis which takes full account of contemporary knowledge in all disciplines and to examine explicitly the metaphorical basis of

evolutionary theories old and new as this has a powerful impact on our humanistic perspectives which underpin all social and political actions We have brought together representatives of two groups of workers those who ultimately believe in working within a transformed neo Darwinism and others who advocate a more radical reorientation away from the orthodoxy Despite their fundamentally different affiliations they are nonetheless able to communicate on questions of evolutionary concepts and mechanisms and their wider relevance to science and society New insights are presented on major issues such as the physicochemical underpinnings of life processes the meaning of natural selection the nature of variation heredity and morphogenesis the integration of organism and environment the active role of the organism in evolution and the evolution of human society The new synthesis which is emerging is an integrated multilevel and multidisciplinary approach to evolution which accords not only with the state of present day knowledge but with our deepest experience of nature
