## **The Spider Web:**

**A Spider's Web** Peter N. Witt, Charles F. Reed, David B. Peakall, 2012-12-06 Gradually a faint brightness appeared in the east and the air which had been very warm through the night felt cool and chilly Though there was no daylight yet the darkness was diminished and the stars looked pale The prison which had been a mere black mass with little shape or form put on its usual aspect and ever and anon a solitary watchman could be seen upon its roof stopping to look down upon the preparations in the street By and by the feeble light grew stronger and the houses with their sign boards and inscriptions stood plainly out in the dull grey morning And now the sun's first beams came glancing into the street and the night's work which in its various stages and in the varied fancies of the lookers on had taken a hundred shapes wore its own proper form a scaffold and a gibbet The Complete Works of Charles Dickens Harper Brothers New York and London Barnaby Rudge Vol II Chapter XIX page 164 Dickens describes an activity which takes place in the early morning hours just before sunrise As the day begins and people start to go about their business and get ready to watch the hanging the hangman is ready with the gallows

**The Spider's web** , **A Spider's Web** Samuel Wachira, 2018 **Spider Webs** William Eberhard, 2020-12-01 In this lavishly illustrated first ever book on how spider webs are built function and evolved William Eberhard provides a comprehensive overview of spider functional morphology and behavior related to web building and of the surprising physical agility and mental abilities of orb weavers For instance one spider spins more than three precisely spaced morphologically complex spiral attachments per second for up to fifteen minutes at a time Spiders even adjust the mechanical properties of their famously strong silken lines to different parts of their webs and different environments and make dramatic modifications in orb designs to adapt to available spaces This extensive adaptive flexibility involving decisions influenced by up to sixteen different cues is unexpected in such small supposedly simple animals As Eberhard reveals the extraordinary diversity of webs includes ingenious solutions to gain access to prey in esoteric habitats from blazing hot and shifting sand dunes to capture ants to the surfaces of tropical lakes to capture water striders Some webs are nets that are cast onto prey while others form baskets into which the spider flicks prey Some aerial webs are tramways used by spiders searching for chemical cues from their prey below while others feature landing sites for flying insects and spiders where the spider then stalks its prey In some webs long trip lines are delicately sustained just above the ground by tiny rigid silk poles Stemming from the author's more than five decades observing spider webs this book will be the definitive reference for years to come
