The Zebra Network:

Animal Social Networks Jens Krause, Richard James, Daniel Franks, Darren Croft, 2014-12-18 The scientific study of networks computer social and biological has received an enormous amount of interest in recent years However the network approach has been applied to the field of animal behaviour relatively late compared to many other biological disciplines Understanding social network structure is of great importance for biologists since the structural characteristics of any network will affect its constituent members and influence a range of diverse behaviours These include finding and choosing a sexual partner developing and maintaining cooperative relationships and engaging in foraging and anti predator behavior This novel text provides an overview of the insights that network analysis has provided into major biological processes and how it has enhanced our understanding of the social organisation of several important taxonomic groups It brings together researchers from a wide range of disciplines with the aim of providing both an overview of the power of the network approach for understanding patterns and process in animal populations as well as outlining how current methodological constraints and challenges can be overcome *Animal Social Networks* is principally aimed at graduate level students and researchers in the fields of ecology zoology animal behaviour and evolutionary biology but will also be of interest to social scientists

The Zebra Network Sean Flannery, 1990 [Computer Networks and the Internet](#) Gerry Howser, 2019-12-23 The goal of this textbook is to provide enough background into the inner workings of the Internet to allow a novice to understand how the various protocols on the Internet work together to accomplish simple tasks such as a search By building an Internet with all the various services a person uses every day one will gain an appreciation not only of the work that goes on unseen but also of the choices made by designers to make life easier for the user Each chapter consists of background information on a specific topic or Internet service and where appropriate a final section on how to configure a Raspberry Pi to provide that service While mainly meant as an undergraduate textbook for a course on networking or Internet protocols and services it can also be used by anyone interested in the Internet as a step by step guide to building one's own Intranet or as a reference guide as to how things work on the global Internet

[River Networks as Ecological Corridors](#) Andrea Rinaldo, Marino Gatto, Ignacio Rodriguez-Iturbe, 2020-10-22 River networks are critically important ecosystems This interdisciplinary book provides an integrated ecohydrological framework blending laboratory field and theoretical evidence that changes our understanding of river networks as ecological corridors It describes how the physical structure of the river environment impacts biodiversity species invasions population dynamics and the spread of waterborne disease State of the art research on the ecological roles of the structure of river networks is summarized including important studies on the spread and control of waterborne diseases biodiversity loss due to water resource management and invasions by non native species Practical implications of this research are illustrated with numerous examples throughout This is an invaluable go to reference for graduate students and researchers interested in river ecology and hydrology and the links between the two

Describing new related research on spatially explicit modeling of the spread of waterborne disease this book will also be of great interest to epidemiologists and public health managers

Social Interaction in Animals: Linking Experimental Approach and Social Network Analysis Cédric Sueur, Frédéric Mery, 2017-03-14 Understanding the link between individual behaviour and population organization and functioning has long been central to ecology and evolutionary biology Behaviour is a response to intrinsic and extrinsic factors including individual state ecological factors or social interactions Within a group each individual can be seen as part of a network of social interactions varying in strength type and dynamic The structure of this network can deeply impact the ecology and evolution of individuals populations and species Within a group social interactions can take many forms and may significantly affect an individual's fitness These interactions may result in complex systems at the group level such as in the case of collective decisions to migrate to build nest or to forage Among them social transmission of information has been studied mostly in vertebrates fish birds and mammals including humans In insects social learning has been unambiguously demonstrated in social Hymenoptera but this probably reflects limited research effort and recent evidence show that even non eusocial insects such as *Drosophila* cockroaches and crickets can copy the behaviour of others Compared to individual learning which requires a trial and error period every generation social learning can potentially result in the stable transmission of behaviours across generations leading to cultural traditions in some species The study of the processes which may facilitate or prevent this transmission and the analyses of the relationship between social network structure and efficiency of social transmission became these recent years an emerging and promising field of research The goal of this research topic is to present the genetic and socio environmental factors affecting social interaction and information or pathogen transmission with the integration of experimental approaches social network analyses and modelling Importantly we aim to understand whether a relationship between social network structures and dynamics can reflect the efficiency of social transmission i.e. can we use social network analysis to predict the social transmission of information or of pathogen collective decision making and ultimately the evolutionary trajectory of a group
