Fundamentals of Weed Science Robert Zimdahl, 2012-12-02. Fundamentals of Weed Science provides an introduction to the basic principles of weed science for undergraduate courses. It discusses several aspects of weed biology and control and traces the history of herbicide development. The book begins with an introduction to weeds covering their definition, characteristics, harmful aspects and the cost of weed control. This is followed by chapters on weed classification, the uses of weeds, weed biology, weed ecology, allelopathy, the significance of plant competition, weed management and control methods and biological weed control. Later chapters deal with herbicides, the most important weed control tools and the ones with the greatest potential for untoward effects. Students of weed science must understand herbicides and the factors governing their use as well as the potential for misuse. These chapters discuss chemical weed control, the properties and uses of herbicides, factors affecting herbicide performance, herbicide application, herbicide formulation, ecological impact of herbicides, pesticide registration and legislation, weed management systems and the future of weed science.

Weed Science - A Plea for Thought - Revisited Robert L. Zimdahl, 2011-09-26. Weed scientists are confident of increasing production through agricultural technology including herbicides but do not must ask if the moral obligation to feed people is sufficient justification for the benefits and harms achieved. A continuing rigorous examination of the science's goals that leads to appropriate change is advocated. Weed scientists have a research consensus, a paradigm. Weeds must be controlled. Herbicides are the best control technology. Agriculture's practitioners should discuss the necessity and risks of their technology. Discussion must include scientific evidence and value laden arguments.
