The X Ray Solution:

Comprehensive Biophysics, 2012-04-12 Biophysics is a rapidly evolving interdisciplinary science that applies theories and methods of the physical sciences to questions of biology. Biophysics encompasses many disciplines including physics, chemistry, mathematics, biology, biochemistry, medicine, pharmacology, physiology, and neuroscience, and it is essential that scientists working in these varied fields are able to understand each other's research. *Comprehensive Biophysics* Nine Volume Set will help bridge that communication gap. Written by a team of researchers at the forefront of their respective fields under the guidance of Chief Editor Edward Egelman, *Comprehensive Biophysics* Nine Volume Set provides definitive introductions to a broad array of topics uniting different areas of biophysics research from the physical techniques for studying macromolecular structure to protein folding, muscle and molecular motors, cell biophysics, bioenergetics, and more. The result is this comprehensive scientific resource, a valuable tool both for helping researchers come to grips quickly with material from related biophysics fields outside their areas of expertise and for reinforcing their existing knowledge. Biophysical research today encompasses many areas of biology. These studies do not necessarily share a unique identifying factor. This work unites the different areas of research and allows users regardless of their background to navigate through the most essential concepts with ease, saving them time and vastly improving their understanding. The field of biophysics counts several journals that are directly and indirectly concerned with the field. There is no reference work that encompasses the entire field and unites the different areas of research through deep foundational reviews. *Comprehensive Biophysics* fills this vacuum, being a definitive work on biophysics. It will help users apply context to the diverse journal literature, offering and aid them in identifying areas for further research. Chief Editor Edward Egelman, *E I C Biophysical Journal* has assembled an impressive world class team of Volume Editors and Contributing Authors. Each chapter has been painstakingly reviewed and checked for consistent high quality. The result is an authoritative overview which ties the literature together and provides the user with a reliable background information and citation resource.

Synchrotron Radiation in Structural Biology

R. Sweet, 2013-03-09 The development of synchrotron radiation (SR) as a research tool was driven largely by the needs of materials scientists and solid state physicists. However, the availability of SR has extended significantly the capability of scientists who study biological structure with radiation. This volume contains some of the results reported at a symposium held at Brookhaven National Laboratory in May 1988 to discuss the application of synchrotron radiation to structural biology. We are grateful for financial support from the U.S. Department of Energy, the National Institutes of Health, Genentech Inc, Blake Industries Inc, Evans and Sutherland Co, The Upjohn Company, Eli Lilly and Company, Enraf Nonius Service Corp, and Associated Universities Inc. We warmly thank Ms Nancy Siemon for her tireless efforts with correspondence and the manuscripts for this symposium volume. RNA Structure and Folding Dagmar Klostermeier, Christian Hammann, 2013-10-14 While structure function relationships of proteins have been studied for a long time structural studies of RNA face additional challenges Nevertheless with the continuous discovery of novel RNA molecules with key cellular functions and of novel pathways and interaction networks the need for structural information of RNA is still increasing This volume provides an introduction into techniques to assess structure and folding of RNA Each chapter explains the theoretical background of one technique and illustrates possibilities and limitations in selected application examples

Methods in Protein Biochemistry Harald Tschesche, 2011-12-23 This book presents a survey of recent developments in protein biochemistry Top researchers in the field of protein biochemistry describe modern methods to address the challenges of protein purification by three phase partitioning and their folding and degradation by the functions of chaperones The significance of peptide purity for fibril formation is addressed as well as the use of target oriented peptide arrays in palliative approaches in mucoviszidose The design and application of protein epitope mimetics just as the structural resolving of the misfolding of various mutant proteins in serpinopathies enlarge our tools in resolving pathophysiological imbalances
