

# Weight and weightlessness

---

Technically speaking, a scale does not measure one's weight.

While we use a scale to measure one's weight, the scale reading is actually a measure of the upward force applied by the scale to balance the downward force of gravity acting upon an object. When an object is in a state of equilibrium (either at rest or in motion at constant speed), these two forces are balanced.

The upward force of the scale upon the person equals the downward pull of gravity (also known as weight)

Technically speaking...

... a scale does not measure your weight; a scale measures the upward force applied to your body.
