Executive Summary** ,1980 In response to the increasing need for small scale solid waste processing facilities the US DOE contracted with Systems Technology Corporation SYSTECH to identify the technologies that should be developed to make such facilities attractive to and viable for small municipalities with solid waste between 50 and 250 tons per day TPD In addition to identifying candidate technologies SYSTECH applied a set of criteria to them to determine those that could best satisfy the existing market conditions The criteria included costs of the alternative landfill disposal material and energy prices developmental status of the technology and environmental impact of the systems The system types studied included those with mechanical separation thermal and thermochemical energy recovery and bioconversion processes For these studies the performance of each system was simulated by a mathematical model After the systems were evaluated the most promising were analyzed to determine which components and operating parameters had
