Interrelationship Between U.S. Tax Policy and U.S. Tax Energy Policy United States. Congress. House. Committee on Government Operations. Commerce, Consumer, and Monetary Affairs Subcommittee,1979 **US Energy Tax Policy**

Gilbert E. Metcalf,2010-12-06 The United States face enormous challenges in the energy area Climate change biofuels policy energy security and environmental degradation are all intimately bound up with energy production and consumption Historically the federal government has relied on tax subsidies to effect energy policy With mounting federal deficits policymakers and advocates are increasingly calling for a rethinking of our energy tax policy How can the federal tax code strengthen environmental policy and reduce security concerns in the area of energy The authors tackle such difficult problems as climate change efficient taxation of oil and gas and optimal oil tax policy in a world with OPEC oil producers dominating world oil supply This volume presents a number of innovative policy suggestions backed by sophisticated and cutting edge research carried out by leading scholars in the area of energy taxation **Energy Abstracts for Policy**

Analysis ,1975-07 **Effects of U.S. Tax Policy on Greenhouse Gas Emissions** National Research Council,Policy and Global Affairs,Board on Science, Technology, and Economic Policy,Committee on the Effects of Provisions in the Internal Revenue Code on Greenhouse Gas Emissions,2013-07-20 The U S Congress charged the National Academies with conducting a review of the Internal Revenue Code to identify the types of and specific tax provisions that have the largest effects on carbon and other greenhouse gas emissions and to estimate the magnitude of those effects To address such a broad charge the National Academies appointed a committee composed of experts in tax policy energy and environmental modeling economics environmental law climate science and related areas For scientific background to produce *Effects of U S Tax Policy on Greenhouse Gas Emissions* the committee relied on the earlier findings and studies by the National Academies the U S government and other research organizations The committee has relied on earlier reports and studies to set the boundaries of the economic environmental and regulatory assumptions for the present study The major economic and environmental assumptions are those developed by the U S Energy Information Administration EIA in its annual reports and modeling Additionally the committee has relied upon publicly available data provided by the U S Environmental Protection Agency which inventories greenhouse gas GHG emissions from different sources in the United States The tax system affects emissions primarily through changes in the prices of inputs and outputs or goods and services Most of the tax provisions considered in this report relate directly to the production or consumption of different energy sources However there is a substantial set of tax expenditures called broad based that favor certain categories of consumption among them employer provided health care owner occupied housing and purchase of new plants and equipment *Effects of U S Tax Policy on*

Greenhouse Gas Emissions examines both tax expenditures and excise taxes that could have a significant impact on GHG emissions

Energy Tax Policy Congressional Research Service, 2015-01-22 A number of energy tax provisions expired at the end of 2014 Expired provisions include those that support renewable electricity the production tax credit PTC provisions that support energy efficiency in both residential and commercial buildings and tax credits for certain biofuels and other alternative fuels Like the 113th Congress the 114th Congress may choose to address expired energy tax provisions The Tax Increase Prevention Act P L 113 295 enacted late in the 113th Congress temporarily extended through 2014 most expired energy tax provisions Energy tax policy may also be considered as part of comprehensive tax reform legislation in the 114th Congress A base broadening approach to tax reform might consider the elimination of various energy tax expenditures in conjunction with a reduction in overall tax rates This was the approach taken in the Tax Reform Act of 2014 H R 1 introduced late in the 113th Congress by then Chairman of the House Ways and Means Committee Dave Camp Alternative revenue sources such as a carbon tax may also be evaluated as part of the tax reform process The Obama Administration has also proposed a number of changes to energy tax policy as part of its annual budget proposal In the past the Administration has proposed repealing a number of existing tax incentives for fossil fuels while providing new or expanded incentives for alternative and advanced technology vehicles renewable electricity energy efficiency and advanced energy manufacturing Energy tax policy involves the use of one of the government s main fiscal instruments taxes both as an incentive and as a disincentive to alter the allocation or configuration of energy resources and their use In theory energy taxes and subsidies like tax policy instruments in general are intended either to correct a problem or distortion in the energy markets or to achieve some economic efficiency equity or even macroeconomic objective The economic rationale for government intervention in energy markets is commonly based on the government s perceived ability to correct for market failures Market failures such as externalities principal agent problems and informational asymmetries result in an economically inefficient allocation of resources in which society does not maximize well being To correct for these market failures governments can utilize several policy options including taxes subsidies and regulation in an effort to achieve policy goals In practice energy tax policy in the United States is made in a political setting determined by fiscal dictates and the views and interests of the key players in this setting including policy makers special interest groups and academic scholars As a result enacted tax policy embodies compromises between economic and political goals which could either mitigate or compound existing distortions
