## **Time Beavers:**

*Time Beavers* Timothy Truman, Mark Acres, 1985      **Beavers** Frank Rosell, Róisín Campbell-Palmer, 2022-01-07 Beavers are represented by two extant species the Eurasian beaver *Castor fiber* and the North American beaver *Castor canadensis* each has played a significant role in human history and dominated wetland ecology in the northern hemisphere Their behaviour and ecology both fascinate and perhaps even infuriate but seemingly never fail to amaze Both species have followed similar histories from relentless persecution to the verge of extinction largely through hunting followed by their subsequent recovery and active restoration which is viewed by many as a major conservation success story Beavers have now been reintroduced throughout Europe and North America demonstrating that their role as a keystone engineer is now widely recognised with proven abilities to increase the complexity and biodiversity of freshwater ecosystems What animals other than humans can simultaneously act as engineers forest workers carpenters masons creators of habitats and nature managers Over the last 20 years there has been a huge increase in the number of scientific papers published on these remarkable creatures and an authoritative synthesis is now timely This accessible text goes beyond their natural history to describe the impacts on humans conflict mitigation animal husbandry management and conservation Beavers Ecology Behaviour Conservation and Management is an accessible reference for a broad audience of professional academics especially carnivore and mammalian biologists researchers and graduate students governmental and non governmental wildlife bodies and amateur natural historians intrigued by these wild animals and the extraordinary processes of nature they exemplify      *Beaver Protection, Management, and Utilization in Europe and North America* Peter E. Busher, Ryszard M. Dzieciolowski, 2012-12-06 By the end of the 19th century both beaver species had been extirpated from large portions of their native ranges The global decline in beaver populations was the direct result of exploitation by humans Now at the end of the 20th century protection management and reintroduction programs coupled with a decline in the demand for beaver fur and other products have allowed beaver populations to increase dramatically Since beavers actively modify their local environment their activities can conflict with human land use Because of this the beaver once considered a unique and exotic component of wetlands is now often considered a nuisance species The history as well as the current status of beaver populations in Europe and North America provide insight into how conservation programs work and into how humans and wildlife interact The initial plenary lecture of the Euro American Mammal Congress July 1998 was presented by Dr Michael L Rosenzweig a professor at the University of Arizona Dr Rosenzweig discussed how humans have used and continue to use natural resources including wildlife and wildland He provided evidence indicating that the current model of reservation conservation could not provide a long term solution to the human wildlife wildland conflict Dr Rosenzweig emphasized that what is required is a move away from purely exploitive activities I would call this exploitive ecology and the development of a reconciliation ecology with wildlife      365 Sketches Joe Janes, 2010-05-23 On January 19 2009 Chicago teacher and
