Time Travels:

Physics of the Human Temporality Ihor Lubashevsky, Natalie Plavinska, 2021-10-21 This book presents a novel account of the human temporal dimension called the human temporality and develops a special mathematical formalism for describing such an object as the human mind One of the characteristic features of the human mind is its temporal extent For objects of physical reality only the present exists which may be conceived as a point like moment in time In the human temporality the past retained in the memory the imaginary future and the present coexist and are closely intertwined and impact one another This book focuses on one of the fragments of the human temporality called the complex present A detailed analysis of the classical and modern concepts has enabled the authors to put forward the idea of the multi component structure of the present For the concept of the complex present the authors proposed a novel account that involves a qualitative description and a special mathematical formalism This formalism takes into account human goal oriented behavior and uncertainty in human perception The present book can be interesting for theoreticians physicists dealing with modeling systems where the human factor plays a crucial role philosophers who are interested in applying philosophical concepts to constructing mathematical models and psychologists whose research is related to modeling mental processes **Hollywood Puzzle**

relativistic temporal paradoxes are completely false Carlo Maria Pace, 2016-07-19 This work demonstrates in a scientifically rigorous way that all the relativistic temporal paradoxes are completely false In particular this treatment by starting from the relativistically correct definition of time demonstrates the falsity of the Twin Paradox by means of proving from every relativistic point of view that in no case is one twin not so old as the other twin Moreover this work by starting

from the relativistically correct definition of time demonstrates in general the impossibility of the temporal paradoxes both in the field of application of the Special Theory of Relativity and in the field of application of the General Theory of Relativity since all the alleged relativistic temporal paradoxes are based only on erroneous definitions of time On the other hand this treatment shows that time is completely independent both from any velocity of physical bodies and from any physical forces Finally this work demonstrates that also the possibility of using two Lorentzian Theories instead of the two Einsteinian Theories of Relativity entails that all the temporal paradoxes in the field of application of relativistic physics are completely false **Danish Yearbook of Philosophy 25** , *Orbital System of the Universe* Antony Welsch,1875 **Works ...**
