Ultrafast Dynamics In Molecules, Nanostructures And Interfaces - Selected Lectures Presented At Symposium On Ultrafast Dynamics Of The 7th International Conference On Materials For Advanced Technologies Guglielmo

Lanzani, Gagik G Gurzadyan, Cesare Soci, T C Sum, 2014-01-22 Primary events in natural systems or devices occur on extremely short time scales and yet determine in many cases the final performance or output For this reason research in ultrafast science is of primary importance and impact in both fundamental research as well as its applications This book reviews the advances in the field addressing timely and open questions such as the role of quantum coherence in biology the role of excess energy in electron injection at photovoltaic interfaces or the dynamics in quantum confined structures e g multi carrier generation The approach is that of a monograph with a broad tutorial introduction and an overview of the recent results This volume includes selected lectures presented at Symposium on Ultrafast Dynamics of the 7th International Conference on Materials for Advanced Technologies

J-aggregates (Volume 2) Takayoshi Kobayashi, Mouni G Bawendi, 2012-03-23 This work deals with J aggregates which have a long history of research The volume covers electronic states linear and nonlinear optical properties Various properties and processes of J aggregates such as super radiance excitons photon echo geometrical structure electron transfer and femtosecond spectroscopy are discussed

Time-Resolved Vibrational Spectroscopy V Hiroaki Takahashi, 2012-12-06 The work contained in this volume is representative of the presentations made by the participants at the Fifth International Conference on Time Resolved Vibrational Spectroscopy which was held at Waseda University Tokyo Japan from June 3 to 7 1991 The conference was the fifth in a biennial series initiated in 1982 by Prof George H Atkinson University of Arizona at Lake Placid USA and subsequently convened by Prof Alfred Laubereau University of Bayreuth Germany and Dr Manfred Stockburger Max Planck Institut Göttingen Germany at Bayreuth Bischofsgrün Germany in 1985 by Prof Joop D W Van Vorst University of Amsterdam at Amersfoort The Netherlands in 1987 and by Prof Thomas G Spiro Princeton University at Princeton USA in 1989 The purpose of the conference is to bring together researchers from various disciplines and provide a forum for discussion of the latest advances in time resolved spectroscopies concerned with transient vibrational phenomena and their application to fundamental scientific and engineering studies The 167 registered participants including 46 students from 14 different countries represented a wide range of scientific disciplines and clearly indicated that the field continues to expand into new areas of physics chemistry biology and materials science Their enthusiasm and the originality and quality of the contributions presented produced a very successful and enjoyable conference

disordered materials and in particular on glasses A large part of the book concerns the recently proposed mode coupling approach to the behaviour of a viscous liquid around its glass transition where the relevant dynamics extend over a broad range in time scales and the application of quite different experimental techniques becomes essential Contributions report on experiments using dielectric relaxation NMR or light scattering techniques and especially neutron scattering techniques One signature of disordered materials is the occurrence of an excess vibrational density of states at low frequencies Some situations are presented where the density of states can be understood by taking into account the peculiarities of intra and intermolecular motions Another approach to the dynamics of disordered materials is the fracton picture developed to describe the excitations of fractal objects Several contributions discuss the dynamics of such fractals studying mainly the vibrational density of states and some discuss the application of the fracton concept to materials without a fractal structure like glasses

Quantum String Theory Noboru Kawamoto, Taichiro Kugo, 1988-10-26 String theories seem to have created a breakthrough in theoretical physics At long last a unified theory of all the fundamental interactions including gravity looks possible This according to theorist Stephen Hawking will mark the end of theoretical physics as we have known it since we will then have a single consistent theory within which to explain all natural phenomena from elementary particles to galactic superclusters Strings themselves are extremely tiny entities smaller than the Planck scale which form loops whose vibrational harmonics can be used to model all the standard elementary particles Of course the mathematical complexities of the theory are daunting and physicists are still at a very early stage in understanding how strings and their theoretical cousins superstrings can be used This proceedings volume gives an overview of the intense recent work in the field and reports latest developments
