

Small scale evaluations in school children in other countries:

Although numbers involved in individual studies are fairly small, all reveal a consistent pattern of increased signs of neuro-motor immaturity in children generally, with higher incidence in children who are under-achieving or receiving support for language, learning or behavioural problems.

Percentage of children in this category varies across regions and may or may not be related to socio-economic factors. Poverty is not necessarily the sole determinant, with children in more affluent areas sometimes showing similar signs. This may be the result of changes in early child caring practises including over-use of baby equipment, less time engaged in unrestricted physical play and social interaction, over exposure to electronic media and more sedentary lifestyles.

These are all areas for further investigation.

Small Scale Evaluations:

Small-Scale Evaluation Colin Robson, 2017-09-28 Evaluation research can assess the value and effectiveness of interventions and innovations involving people. While this has often been on a grand scale, this book focuses on small scale projects carried out by an individual or small group, typically lasting for weeks or at most a few months at a local rather than national level. Using limited jargon and featuring integrated real world examples, this second edition offers a clear, accessible background to evaluation and prepares you to undertake your own small scale evaluation research project. Key features include discussion of different approaches to evaluation and how to choose between them. The advantages and disadvantages of randomized controlled trials (RCTs), realist evaluation and its increasing importance, the centrality of ethical and political issues, the influence and opportunity of the Internet. Tightly focused on the realities of carrying out small scale evaluation, *Small Scale Evaluation* is a highly practical guide covering the needs of both social scientists and others without this background. Colin Robson is an Emeritus Professor in the School of Human Health Sciences at the University of Huddersfield.

Small-scale evaluation C. Robson, 2000 *Small-Scale Evaluation in Health* Sinead Brophy, Helen Snooks, Lesley Griffiths, 2008-03-03 Setting out the basics of designing, conducting and analysing an evaluation study in healthcare, the authors take a practical approach assuming no previous knowledge or experience of evaluation. All the basics are covered including how to plan an evaluation, research governance and ethics, understanding data, interpreting findings, writing a report. Cases included throughout to demonstrate evaluation in action and self-learning courses give the reader an opportunity to develop their skills further in the methods and analysis involved in evaluation. [Evaluation of Continuing Education in the Health Professions](#) Stephen Abrahamson, 2012-12-06 Phil R Manning Can you prove that continuing education really makes any difference? Over the years, educators concerned with continuing education (CE) for health professionals have either heard or voiced that question in one form or another more than once. But because of the difficulty in measuring the specific effects of a given course, program or conference, the question has not been answered satisfactorily. Since CE is costly, since CE is now mandated in some states for re-registration and since its worth has not been proven in formal evaluation research, the pressure to evaluate remains strong. The question can be partially answered by a more careful definition of continuing education, particularly the goals to be achieved by CE. Another part of the answer depends on the development of a stronger commitment to evaluation of CE by its providers. But a significant part of the answer might be provided through the improvement of methods used in evaluation of continuing education for health professionals. To address this last concern, the Development and Demonstration Center in Continuing Education for the Health Professions of the University of Southern California organized and conducted a meeting of academicians and practitioners in evaluation of continuing education. During a three-day period, participants heard formal presentations by five invited speakers and then discussed the application of the state of the art of educational evaluation to problems of evaluation of continuing education.
