<u>Mathematical Frameworks for Component Software</u> Zhiming Liu,Jifeng He,2006 The range of components technology is both wide and diverse but some common understanding is emerging through the ideas of model based development These include the notions of interfaces contracts services connectors and architectures Key issues in the application of the technology are becoming clearer including the consistent integration of different views of a component component composition component coordination and transformation for platforms However we still know little about theories that support analysis and synthesis of component based systems The distinct feature of this volume is its focus on mathematical models that identify the core concepts as first class modeling elements and its providing of techniques for integrating and relating them The volume contains eleven chapters by well established researchers writing from different perspectives Each chapter gives explicit definitions of components in terms of a set of key aspects and addresses some of the problems of integration and analysis of various views component specification component composition component coordination refinement and substitution and techniques for solving problems The concepts and techniques are motivated and explained with the help of examples and case studies   **Using a Proxy to Enable Communication Overlap with Computation** Stephen Lau,2003   *1995 URSI International Symposium on Signals, Systems, and Electronics* ,1995   **ACM Conference on Computer and Communications Security** ,2001   <u>Designing Enterprise Applications with the J2EE Platform (Custom Version)</u> Inderjeet Singh,Beth Stearns,Mark Johnson,Enterprise Team,2002-03-25   **Advanced**
