Text Book of Zoology Johan Erik Vesti Boas, 1896 **American Homes and Gardens** , 1909 **Efficient and Exact Computation of Inclusion Dependencies for Data Integration** Jana Bauckmann, Ulf Leser, Felix Naumann, 2010 Data obtained from foreign data sources often come with only superficial structural information such as relation names and attribute names Other types of metadata that are important for effective integration and meaningful querying of such data sets are missing In particular relationships among attributes such as foreign keys are crucial metadata for understanding the structure of an unknown database The discovery of such relationships is difficult because in principle for each pair of

attributes in the database each pair of data values must be compared A precondition for a foreign key is an inclusion dependency IND between the key and the foreign key attributes We present with Spider an algorithm that efficiently finds all INDs in a given relational database It leverages the sorting facilities of DBMS but performs the actual comparisons outside of the database to save computation Spider analyzes very large databases up to an order of magnitude faster than previous approaches We also evaluate in detail the effectiveness of several heuristics to reduce the number of necessary comparisons Furthermore we generalize Spider to find composite INDs covering multiple attributes and partial INDs which are true INDs for all but a certain number of values This last type is particularly relevant when integrating dirty data as is often the case in the life sciences domain our driving motivation
