Spotlight-Mode Synthetic Aperture Radar: A Signal Processing Approach Charles V. J. Jakowatz, Daniel E. Wahl, Paul H. Eichel, Dennis C. Ghiglia, Paul A. Thompson, 2012-12-06 Modern airborne and spaceborne imaging radars known as synthetic aperture radars SARs are capable of producing high quality pictures of the earth s surface while avoiding some of the shortcomings of certain other forms of remote imaging systems Primarily radar overcomes the nighttime limitations of optical cameras and the cloud cover limitations of both optical and infrared imagers In addition because imaging radars use a form of coherent illumination they can be used in certain special modes such as interferometry to produce some unique derivative image products that incoherent systems cannot One such product is a highly accurate digital terrain elevation map DTEM The most recent ca 1980 version of imaging radar known as spotlight mode SAR can produce imagery with spatial resolution that begins to approach that of remote optical imagers For all of these reasons synthetic aperture radar imaging is rapidly becoming a key technology in the world of modern remote sensing Much of the basic workings of synthetic aperture radars is rooted in the

concepts of signal processing Starting with that premise this book explores in depth the fundamental principles upon which the spotlight mode of SAR imaging is constructed using almost exclusively the language concepts and major building blocks of signal processing Spotlight Mode Synthetic Aperture Radar A Signal Processing Approach is intended for a variety of audiences Engineers and scientists working in the field of remote sensing but who do not have experience with SAR imaging will find an easy entrance into what can seem at times a very complicated subject Experienced radar engineers will find that the book describes several modern areas of SAR processing that they might not have explored previously e g interferometric SAR for change detection and terrain elevation mapping or modern non parametric approaches to SAR autofocus Senior undergraduates primarily in electrical engineering who have had courses in digital signal and image processing but who have had no exposure to SAR could find the book useful in a one semester course as a reference

Infrastructure Monitoring with Spaceborne SAR Sensors ANDREI ANGHEL,GABRIEL VASILE,REMUS CACOVEANU,2017-03-14 This book presents a novel non intrusive infrastructure monitoring technique based on the detection and tracking of scattering centers in spaceborne SAR images The methodology essentially consists of refocusing

each available SAR image on an imposed 3D point cloud associated to the envisaged infrastructure element and identifying the reliable scatterers to be monitored by means of four dimensional 4D tomography The methodology described in this book provides a new perspective on infrastructure monitoring with spaceborne SAR images is based on a standalone processing chain and brings innovative technical aspects relative to conventional approaches The book is intended primarily for professionals and researchers working in the area of critical infrastructure monitoring by radar remote sensing
