*Recent Synthetic Differential Geometry* Herbert Busemann, 2012-12-06 A synthetic approach to intrinsic differential geometry in the large and its connections with the foundations of geometry was presented in *The Geometry of Geodesics* 1955 quoted as G It is the purpose of the present report to bring this theory up to date Many of the later investigations were stimulated by problems posed in G others concern new topics Naturally references to G are frequent However large parts in particular Chapters I and III as well as several individual sections use only the basic definitions These are repeated here sometimes in a slightly different form so as to apply to more general situations In many

cases a quoted result is quite familiar in Riemannian Geometry and consulting G will not be found necessary There are two exceptions The theory of parallels is used in Sections 13 15 and 17 without reformulating all definitions and properties of circles and limit spheres Secondly many items from the literature in G pp 409 412 are used here and it seemed superfluous to include them in the present list of references pp 106 110 The quotations are distinguished by and so that for example Freudenthal 1 and I are found respectively in G and here **Monthly Notices of the Royal Astronomical Society** Royal Astronomical Society, 1920 The Journal publishes the results of original research in positional and dynamical astronomy astrophysics radio astronomy cosmology space research and the design of astronomical instruments *The Mathematical Gazette*, 1922 Geometry of Geodesics and Related Topics, 1984 **Proceedings of the Royal Irish Academy**, 1929
