The Changes Behind Canadas Income Distribution Cause For Concern:

The Changes Behind Canada's Income Distribution Catherine G. McWatters, Charles M. Beach, 1989

Small Differences That Matter David Card, Richard B. Freeman, 2009-02-15 This volume the first in a new series by the National Bureau of Economic Research that compares labor markets in different countries examines social and labor market policies in Canada and the United States during the 1980s It shows that subtle differences in unemployment compensation unionization immigration policies and income maintenance programs have significantly affected economic outcomes in the two countries For example Canada s social safety net more generous than the American one produced markedly lower poverty rates in the 1980s Canada saw a smaller increase in earnings inequality than the United States did in part because of the strength of Canadian unions which have twice the participation that U S unions do Canada s unemployment figures were much higher than those in the United States not because the Canadian economy failed to create jobs but because a higher percentage of nonworking time was reported as unemployment These disparities have become noteworthy as policy makers cite the experiences of the other country to support or oppose particular initiatives

Skill Differentials in Canada in an Era of Rising Labor Market Inequality Richard Barry Freeman, Karen Needels, 1991 This paper examines educational earnings differentials in Canada in the 1980s and compares changes in differentials to those in the United States Our major finding is that the college high school differential increased much less in Canada than in the United States We also find that within educational groups the distribution of earnings widened gender pay gaps narrowed and age pay gaps increased in Canada as in the United States The greater growth of the college graduate proportion of the work force in Canada than in the United States is one important reason why differentials rose more modestly in Canada than in the United States The greater strength of Canadian unions in wage setting and the faster growth of real national output and better trade balance in Canada may also have contributed to the lesser rise in differentials Because Canada and the United States have so many characteristics in common we interpret our results as indicating that the massive rise of skill differentials in the United States was not the result of some inexorable shift in the economic structure of advanced capitalist countries but rather reflected specific developments in the U S labor market and the way in which the country s decentralised wage setting system adjusted to these developments
