*Conservation Criminology* Meredith L. Gore,2017-03-14 This important new text introduces conservation criminology as the interdisciplinary study of environmental exploitation and risks at the intersection of human and natural systems Taking an interdisciplinary approach the book enhances understanding of the various human and organizational behaviors that pose risks to the environment humans and drive conservation crime As human population growth global market economies climate change deforestation and illegal exploitation of natural resources continue to increase academic research from numerous disciplines is needed to address these challenges Conservation Criminology promotes thinking about how unsustainable natural resources exploitation is a cause and a consequence of social conflict Case studies profiled in the book demonstrate this cause and effect type situation as well as innovative approaches for reducing risks to people and the environment This text encourages readers to consider how humans behave in response to environmental risks and the various mechanisms that constitute effective and ineffective approaches to enforcement of wildlife crimes including environmental and conservation policy Case studies from the USA Latin America Africa and Asia highlight corruption in conservation global trade in electronic waste illegal fishing illegal logging human wildlife conflict technology and space water insecurity wildlife disease and wildlife poaching Taken together chapters expand the reader s perspective and employ tools to understand and address environmental crimes and risks and to provide novel empirical evidence for positive change

With established contributors providing interdisciplinary and global perspectives this book establishes a foundation for the emerging field of conservation criminology **Wild Animals of North America** Edward William Nelson, 1918 Atlantic Coast Line News, 1960 Alaska Fish & Game, 1986 SFI Bulletin, 1983 **Florida Almanac** Del Marth, 1995-04 Wild Eelin William Black, 1898 **Wildlife-vehicle Collision and Crossing Mitigation Measures** Marcel Pieter Huijser, 2007 This report reviews 39 mitigation measures that reduce animal vehicle collisions and that provide habitat connectivity for wildlife across highways The overview is restricted to mitigation measures aimed at large terrestrial mammals deer size and larger However this report also includes information regarding how such measures may affect or benefit federally endangered or threatened species in Montana regardless of their size In addition to the detailed information for each mitigation measure a summary table is provided that provides at a glance information on the costs and benefits of the individual mitigation measures for which such data were available Furthermore the report graphically illustrates which measures have the best monetary balance the difference between benefits and costs and which measures reduce animal vehicle collisions and associated costs best Based on the results the authors of this report identified wildlife fencing with or without wildlife underpasses or a combination of wildlife underpasses and overpasses and animal detection systems with wildlife fencing as the most cost effective mitigation measures Animal detection systems without wildlife fences or wildlife fences with a high density of wildlife overpasses are also cost effective but more data on system effectiveness are needed before these systems are recommended for implementation rather than further study The final section of the report provides suggestions on the implementation or study for each of the 39 mitigation measures The Green Agenda in American Politics Robert J. Duffy, 2003 Organizations such as the Sierra Club and Friends of the Earth are familiar to anyone with an interest in environmental protection As activist groups they played by the same rules for years But in 1994 the rules changed With the Republican takeover of Congress environmental groups faced sweeping changes in federal policies that threatened the enforcement of environmental laws As these organizations intensified their efforts to meet these challenges they also altered their electoral strategies and political spending patterns This book traces those actions and shows what they mean for the future of environmentalism in the political arena While environmental advocacy groups have become bigger and better funded in recent years so have the corporate interests that compete with them for the attention of public and politicians The Green Agenda in American Politics offers a new look at environmental advocacy that focuses on contemporary lobbying electioneering and agenda setting in this new context Drawing on interviews with activists from a wide range of organizations Robert Duffy describes what environmental groups actually do when lobbying officials or the public He examines activity at both national and state levels to emphasize their growing use of websites email and action alert networks to conduct more sophisticated grassroots campaigns and he shows how they are devoting more funds to unregulated forms of spending such as independent expenditure issue advocacy advertising and public education campaigns

Duffy also tracks emerging trends in interest group politics and provides an overview of activism through the early 1990s. He then documents the emergence of more aggressive action after 1994, such as providing campaign services to candidates and mounting voter registration drives. He also shows how state and local groups have begun to play more important roles in the wake of the rollback of federal environmental regulations. Brimming with new insights into interest group lobbies in general and contemporary environmental groups in particular, Duffy's book opens a new window on the influence of Big Money in the supposedly democratic electoral process. *Watched by Wild Animals* Enos A.
