## Zz 2 Homotopy Theory:

**ZZ/2 - Homotopy Theory** M. C. Crabb, 1980 This account is a study of twofold symmetry in algebraic topology **ZZ/2 - Homotopy Theory** Michael Charles Crabb, 2014-05-14 This account is a study of twofold symmetry in algebraic topology The author discusses specifically the antipodal involution of a real vector bundle multiplication by  $I$  in each fibre doubling and squaring operations the symmetry of bilinear forms and Hermitian  $K$  theory In spite of its title this is not a treatise on equivariant topology rather it is the language in which to describe the symmetry Familiarity with the basic concepts of algebraic topology homotopy stable homotopy homology  $K$  theory the Pontrjagin Thom transfer construction is assumed Detailed proofs are not given the expert reader will be able to supply them when necessary yet nowhere is credibility lost Thus the approach is elementary enough to provide an introduction to the subject suitable for graduate students although research workers will find here much of interest *Geometric Applications of Homotopy Theory I* M. G. Barratt, M. E. Mahowald, 2006-11-15 *Proceedings of the Northwestern Homotopy Theory Conference* Haynes R. Miller, Stewart Priddy, 1983 **Geometric Applications of Homotopy Theory** Michael G. Barratt, Mark E. Mahowald, 1978 **Algebraic Topology** Mark E. Mahowald, Stewart Priddy, 1989 This book will provide readers with an overview of some of the major developments in current research in algebraic topology Representing some of the leading researchers in the field the book contains the proceedings of the International Conference on Algebraic Topology held at Northwestern University in March 1988 Several of the lectures at the conference were expository and will therefore appeal to topologists in a broad range of areas The primary emphasis of the book is on homotopy theory and its applications The topics covered include elliptic cohomology stable and unstable homotopy theory classifying spaces and equivariant homotopy and cohomology Geometric topics such as knot theory divisors and configurations on surfaces foliations and Siegel spaces are also discussed Researchers wishing to follow current trends in algebraic topology will find this book a valuable resource **Conference on Homotopy Theory, Evanston, Illinois, 1974**, 1975 *The Cohomology of Chevalley Groups of Exceptional Lie Type* Samuel N. Hambleton, 1988-06-01 These notes were prepared for the DMV Seminar held in Dusseldorf Schloss Mickeln from June 28 to July 5 1987 They consist of two parts which can be read independently The reader is presumed to have a basic education in differential and algebraic topology Surgery theory is the basic tool for the investigation of differential and topological manifolds A systematic development of the theory is a long and difficult task The purpose of these notes is to describe simple examples and at the same time to give an introduction to some of the systematic parts of the theory The first part is concerned with examples They are related to representations of finite groups and group actions on spheres and are considered as a generalisation of the spherical space form problem The second part reviews the general setting of surgery theory and reports on the computation of the surgery abstraction groups Both parts present

material not covered in any textbook and also give an introduction to the literature and areas of research 1
