Zholudeva,Michael Aron Lane,2022-11-29 The spinal cord is comprised of four types of neurons motor neurons pre ganglionic neurons ascending projection neurons and spinal interneurons Interneurons are neurons that process information within local circuits and have an incredible ability for neuroplasticity whether due to persistent activity neural injury or in response to disease Although by definition their axons are restricted to the same structure as the soma in this case the spinal cord spinal interneurons are capable of sprouting and rewiring entire neural circuits and contribute to some restoration of disrupted neural communication after injury to the spinal cord i e bypassing the lesion site Spinal Interneurons provides a focused overview of how scientists classify interneurons in general the techniques used to identify subsets of interneurons their roles in specific neural circuits and the scientific evidence for their neuroplasticity Understanding the capacity for neuroplasticity and identity of specific spinal interneurons that are optimal for recovery may help determine cellular candidates for developing therapies Spinal Interneurons provides neuroscientists clinicians and trainees a reference book exclusively concentrating on spinal interneurons the techniques and experiments employed to identify and study these cells as part of normal and compromised neural circuits and highlights the therapeutic potential of these cells by presenting the relevant pre clinical and clinical work to date People in industry will also benefit from this book which compiles the latest in therapeutic strategies for targeting spinal interneurons what considerations there are for the development and use of treatments and how such treatments can not only be translated to the clinic but how existing treatments should be appropriately reverse translated to the bench Comprehensive overview of techniques used to identify characterize and classify spinal interneurons and their role in neural circuits Description of the role that spinal interneurons play in mediating plasticity after compromise to spinal neural networks In depth discussion of therapeutic potential of spinal interneurons for spinal cord injury and or disease
