The SR Programming Language George Reid Andrews,1993 **The SR Programming Language** Gregory R. Andrews,Ronald A. Olsson,1993 SR Synchronizing Resources is a powerful and flexible language for concurrent programming With its explicit mechanisms and concurrency communication and synchronization programmers can easily learn to write programs for both shared and distributed memory applications and machines This book written by the language designers provides a complete introduction to SR and gives the reader the tools for learning about and experimenting with concurrency Features Provides an accessible clear introduction to SR by the language designers Teaches practical techniques through numerous realistic examples of parallel and distributed programming problems Examines classic concurrent programming problems as well as many important parallel and distributed programming problems Illustrates trade offs between language mechanisms to help the reader understand and make optimum design decisions Reinforces key points with numerous end of chapter exercises Includes six appendices that summarize the language for quick reference show how to develop and execute programs and describe the implementation The SR language implementation is available free from the SR Project University of Arizona at ftp cs arizona edu sr 0805300880B04062001 **Languages, Compilers and Run-Time Systems for Scalable Computers** Boleslaw K. Szymanski,Balaram Sinharoy,2012-12-06 Language Compilers and Run time Systems for Scalable Computers contains 20 articles based on presentations given at the third workshop of the same title and 13 extended abstracts from the poster session Starting with new developments in classical problems of parallel compiler design such as dependence analysis and an exploration of loop parallelism the book goes on to address the issues of compiler strategy for specific architectures and programming environments Several chapters investigate support for multi threading object orientation irregular computation locality enhancement and communication optimization Issues of the interface between language and operating system support are also discussed Finally the load balance issues are discussed in different contexts including sparse matrix computation and iteratively balanced adaptive solvers for partial differential equations Some additional topics are also discussed in the extended abstracts Each chapter provides a bibliography of relevant papers and the book can thus be used as a reference to the most up to date research in parallel software engineering *Languages, Compilers, and Run-Time Systems for Scalable Computers* David O'Hallaron,2003-06-29 This book constitutes the strictly refereed post workshop proceedings of the 4th International Workshop on Languages Compilers and Run Time Systems for Scalable Computing LCR 98 held in Pittsburgh PA USA in May 1998 The 23 revised full papers presented were carefully selected from a total of 47 submissions also included are nine refereed short papers All current issues of developing software systems for parallel and distributed computers are covered in particular irregular applications automatic parallelization run time parallelization load balancing message passing systems parallelizing compilers shared memory systems client server applications etc **The JR Programming Language** Ronald

A. Olsson, Aaron W. Keen, 2006-04-18 JR is a language for concurrent programming It is an imperative language that provides explicit mechanisms for concurrency communication and synchronization JR is an extension of the Java programming language with additional concurrency mechanisms based on those in the SR Synchronizing Resources programming language It is suitable for writing programs for both shared and distributed memory applications and machines it is of course also suitable for writing sequential programs JR can be used in applications such as parallel computation distributed systems simulation and many others JR supports many features useful for concurrent programming However our goals have always been keeping the language simple and easy to learn and use We have achieved these goals by integrating common notions both sequential and concurrent into a few powerful mechanisms We have implemented these mechanisms as part of a complete language to determine their feasibility and cost to gain hands on experience and to provide a tool that can be used for research and teaching The introduction to Chapter 1 expands on how JR has realized our design goals *Abstract Machine Models for Parallel and Distributed Computing* M. Kara, J. R. Davy, D. Goodeve, 1996 Abstract Machine Models have played a profound though frequently unacknowledged role in the development of modern computing systems They provide a precise definition of vital concepts allow system complexity to be managed by providing appropriate views of the activity under consideration enable reasoning about the correctness and quantitative performance of proposed problem solutions and encourage communication through a common medium of expression Abstract Models in Parallel and Distributed computing have a particularly important role in the development of contemporary systems encapsulating and controlling an inherently high degree of complexity The Parallel and Distributed computing communities have traditionally considered themselves to be separate However there is a significant contemporary interest in both of these communities in a common hardware model a set of workstation class machines connected by a high performance network The traditional Parallel Distributed distinction therefore appears under threat *Integrating Concurrency Constructs with Object-oriented Programming Languages* Aaron William Keen, 2002 **ACM Transactions on Programming Languages and Systems** Association for Computing Machinery, 2004 **Concurrent Programming** Gregory R. Andrews, 1991 *Mathematics of Computing* Parallelism **Higher Order Logic Theorem Proving and Its Applications** Jeffrey J. Joyce, Carl-Johan H. Seger, 1994-04-28 This volume constitutes the refereed proceedings of the 1993 Higher Order Logic User's Group Workshop held at the University of British Columbia in August 1993 The workshop was sponsored by the Centre for Integrated Computer System Research It was the sixth in the series of annual international workshops dedicated to the topic of Higher Order Logic theorem proving its usage in the HOL system and its applications The volume contains 40 papers including an invited paper by David Parnas McMaster University Canada entitled Some theorems we should prove **Computational Science - ICCS 2004** Marian Bubak, Geert D. van Albada, Peter M.A. Sloot, Jack J. Dongarra, 2004-05-13 The International Conference on Computational Science ICCS 2004 held in Krakow Poland June 6-9 2004 was a follow up to the highly successful ICCS 2003 held at two

locations in Melbourne Australia and St Petersburg Russia ICCS 2002 in Amsterdam The Netherlands and ICCS 2001 in San Francisco USA As computational science is still evolving in its quest for subjects of investigation and efficient methods ICCS 2004 was devised as a forum for scientists from mathematics and computer science as the basic computing disciplines and application areas interested in advanced computational methods for physics chemistry life sciences engineering arts and humanities as well as computer system vendors and software developers The main objective of this conference was to discuss problems and solutions in all areas to identify new issues to shape future directions of research and to help users apply various advanced computational techniques The event harvested recent developments in computational grids and next generation computing systems tools advanced numerical methods data driven systems and novel application fields such as complex systems nanotechnology physics and population evolution Languages, Compilers and Run-time Systems for Scalable Computers, 2000 **Implementation Issues in Concurrent Programming Languages** Gregory David Benson, 1999 **Enhancing the JR Concurrent Programming Language with New Java 5.0 Features** Hiu Ning Chan, 2005 Parallel and Distributed Systems, 1994 International Conference On Lionel M.
