Genome-based Nutrition Strategies for Preventing Diet-related Chronic Diseases: Where Genes, Diet, and Food Culture Meet Arturo Panduro, Omar Ramos-Lopez, Claudia Ojeda-Granados, 2024-07-02 Human populations that have recently undergone substantial changes in their traditional social cultural and dietary habits have shown an increased susceptibility to developing chronic diet related diseases concerning their genetic background One factor is that the population s adaptive genetic variants related to its evolutionary history are exposed to different physical and lifestyle environments that underlie and influence the current patterns of disease risk Under this perspective the current obesogenic environment has promoted the acculturation of a westernized diet disrupting the ancestral gene foods nutrients bioactive compounds interactions i e ancestral genetic ethnic profile vs modern lifestyle Modern lifestyles including unhealthy dietary patterns have further impaired the consumption of staple foods with essential nutrients and functional properties increasing the incidence of obesity and associated comorbidities However most conventional nutrition approaches targeting chronic diseases have limited impact on managing the leading non communicable diseases affecting modern societies [Genetics](#) Ruth M. The Genetic Diet Seymour L. Myers, 2000-10 After nearly half a century in family practice I have written a book outlining a rationale for identifying the human animal as essentially carnivorous I have lectured to small groups suggesting that many of the ills of man could be traced to dietary indiscretion as he deviated from his genetically programmed feeding habits That many were impressed by my discussions served my vanity well but most importantly suggested that there could be a need for a concept with broad appeal in the lay community and could even stimulate some interest in academia I found supportive evidence for my views and conceived the idea that I could present to the public a feeding program which would as closely as possible be consistent with the feeding practices of our ancestors My interest in nutrition actually antedated my training in medicine when as a student I came upon the writings of Vilhjalmur Stefansson who preached carnivorousness Roger Williams who espoused the concept of biochemical individuality Marvin Harris who described the feeding behavior of the human in rational terms and Reay Tannahill who explored the history of the feeding habits of humans The major focus of the book is that we might avoid the modern diseases of degeneration such as diabetes arteriosclerosis osteoporosis arthritis mental retardation and deterioration obesity and other eating disorders hyperlipidemia anemia vitamin deficiencies and possibly tumors in general by excluding certain dietary elements so that we can grow old in the best of health Essentially I have indicated that it is my view however revolutionary that dairy foods and grass seeds grain are to be avoided if it is possible for the human animal to feed otherwise I have attempted to compare feeding customs in our society to those of our primitive contemporaries to those of our recent ancestors and to those of our more remote ancestors With some exceptions I

have taken up the human as he existed after the last glacier some ten to twelve thousand years ago and have followed him to the present The key elements of my discussion are genetic influences carnivorosity excessive consumption and inappropriate choices Though I have mentioned some disorders specifically and others more generally I have not made therapeutic recommendations directed toward particular diseases as others have done The book is therefore not intended to be a treatment manual I have provided no recipes as others have done so my book is not a cookbook I recognize that other books touch on many of the subjects I discuss but none of these proposes that carnivorosity may be the ideal and that the use of other foods is a compromise at best The information presented has come from hundreds of sources published over a period of at least a century in a wide variety of publications I list as recommended reading major sources of information which have served me well and may further enlighten the interested reader I include a glossary of terms since in many instances my language may include terms unfamiliar to the average layman The book is primarily intended for the lay public but may also be of interest to students and practitioners of nutrition and will hopefully further their interest in the genetic origins of our nutritional requirements The following subjects are discussed Biochemical Individuality Our Primitive Ancestors Contemporary Primitive Societies Genetics Ancestry Nutrition Malnutrition Starvation Food in General Meat Milk Dairy Products Breast Milk Infant Feeding Vegetarianism Excess Consumption Obesity Diet Disease Particular Requirements Activity Exercise Feeding the Brain Health Foods Junk Foods Food Allergies Adaptation Ethnic Influences Biblical Admonitions Carbohydrates **Dietary Modulation of Tumorigenesis and Gene Expression in the Min Mouse** Mridvika,2001 The Journal of Nutrition John Raymond Murlin,George R.
