The Geometry Of Character:

Geometry, Topology And Dynamics Of Character Varieties William Goldman, Caroline Series, Ser Peow Tan, 2012-06-18 This volume is based on lectures given at the highly successful three week Summer School on Geometry Topology and Dynamics of Character Varieties held at the National University of Singapore's Institute for Mathematical Sciences in July 2010 Aimed at graduate students in the early stages of research the edited and refereed articles comprise an excellent introduction to the subject of the program much of which is otherwise available only in specialized texts Topics include hyperbolic structures on surfaces and their degenerations applications of ping pong lemmas in various contexts introductions to Lorenzian and complex hyperbolic geometry and representation varieties of surface groups into $PSL(2, \mathbb{C})$ and other semi simple Lie groups This volume will serve as a useful portal to students and researchers in a vibrant and multi faceted area of mathematics

Geometry and Representation Theory of Real and p-adic groups Juan Tirao, David Vogan, Joe Wolf, 2012-12-06 The representation theory of Lie groups plays a central role in both classical and recent developments in many parts of mathematics and physics In August 1995 the Fifth Workshop on Representation Theory of Lie Groups and its Applications took place at the Universidad Nacional de Cordoba in Argentina Organized by Joseph Wolf Nolan Wallach Roberto Miatello Juan Tirao and Jorge Vargas the workshop offered expository courses on current research and individual lectures on more specialized topics The present volume reflects the dual character of the workshop Many of the articles will be accessible to graduate students and others entering the field Here is a rough outline of the mathematical content The editors beg the indulgence of the readers for any lapses in this preface in the high standards of historical and mathematical accuracy that were imposed on the authors of the articles Connections between flag varieties and representation theory for real reductive groups have been studied for almost fifty years from the work of Gelfand and Naimark on principal series representations to that of Beilinson and Bernstein on localization The article of Wolf provides a detailed introduction to the analytic side of these developments He describes the construction of standard tempered representations in terms of square integrable partially harmonic forms on certain real group orbits on a flag variety and outlines the ingredients in the Plancherel formula Finally he describes recent work on the complex geometry of real group orbits on partial flag varieties

The Geometry of Multivariate Statistics Thomas D. Wickens, 2014-02-25 A traditional approach to developing multivariate statistical theory is algebraic Sets of observations are represented by matrices linear combinations are formed from these matrices by multiplying them by coefficient matrices and useful statistics are found by imposing various criteria of optimization on these combinations Matrix algebra is the vehicle for these calculations A second approach is computational Since many users find that they do not need to know the mathematical basis of the techniques as long as they have a way to transform data into results the computation can be done by a package of computer programs that somebody else has written An approach from this perspective emphasizes how the computer packages are used and is usually coupled with rules that

allow one to extract the most important numbers from the output and interpret them Useful as both approaches are particularly when combined they can overlook an important aspect of multivariate analysis To apply it correctly one needs a way to conceptualize the multivariate relationships that exist among variables This book is designed to help the reader develop a way of thinking about multivariate statistics as well as to understand in a broader and more intuitive sense what the procedures do and how their results are interpreted Presenting important procedures of multivariate statistical theory geometrically the author hopes that this emphasis on the geometry will give the reader a coherent picture into which all the multivariate techniques fit

NASA Technical Paper ,1983 **The Geometry of Modernism** Miranda B. Hickman,2005 Addressing both the literature and the visual arts of Anglo American modernism The Geometry of Modernism recovers a crucial development of modernism s early years that until now has received little sustained critical attention the distinctive idiom composed of geometric forms and metaphors generated within the early modernist movement of Vorticism formed in London in 1914 Focusing on the work of Wyndham Lewis leader of the Vorticist movement as well as Ezra Pound H D and William Butler Yeats Hickman examines the complex of motives out of which Lewis initially forged the geometric lexicon of Vorticism and then how Pound H D and Yeats later responded to it and the values that it encoded enlisting both the geometric vocabulary and its attendant assumptions and ideals in transmuted form in their later modernist work Placing the genesis and appropriation of the geometric idiom in historical context Hickman explores how despite its brevity as a movement Vorticism in fact exerted considerable impact on modernist work of the years between the wars in that its geometric idiom enabled modernist writers to articulate their responses to both personal and political crises of the 1930s and 1940s Informed by extensive archival research as well as treatment of several of the least known texts of the modernist milieu The Geometry of Modernism clarifies and enriches the legacy of this vital period
