Statistical And Computational Methods In Data Analysis:

Data Analysis Siegmund Brandt, 2012-12-06 1 1 Typical Problems of Data Analysis Every branch of experimental science after passing through an early stage of qualitative description concerns itself with quantitative studies of the phenomena of interest i.e. measurements In addition to designing and carrying out the experiment an important task is the accurate evaluation and complete exploitation of the data obtained Let us list a few typical problems 1 A study is made of the weight of laboratory animals under the influence of various drugs After the application of drug A to 25 animals an average increase of 5 % is observed Drug B used on 10 animals yields a 3 % increase Is drug A more effective The averages 5 % and 3 % give practically no answer to this question since the lower value may have been caused by a single animal that lost weight for some unrelated reason One must therefore study the distribution of individual weights and their spread around the average value Moreover one has to decide whether the number of test animals used will enable one to differentiate with a certain accuracy between the effects of the two drugs 2 In experiments on crystal growth it is essential to maintain exactly the ratios of the different components From a total of 500 crystals a sample of 20 is selected and analyzed

Data Science in Social Research Uwe Engel, Lena Dahlhaus, 2026-02-02 Society is changing it is becoming more diverse and digital Social media today plays a central role in human communication With a changing society the way social scientists analyze it is also evolving In recent years it has become significantly more difficult to encourage people to participate in surveys Furthermore digitization opens up data options that go beyond the survey method Information published online represents valuable digital behavioral traces and provides social researchers with another important source of data alongside their scientific surveys which in recent years have increasingly been conducted online Computational methods have played a central role in social research from the very beginning This applies today more than ever to data analysis but now also to data collection The increasing attention paid to machine learning methods in the statistical analysis of social science data represents a further remarkable development in the analysis of social

science data This textbook addresses these developments and familiarizes readers with both elementary and more advanced methods of data analysis Fundamentals and techniques of data management programming with R statistical data analysis descriptive and causal inference as well as predictive modeling are covered in depth All methods are exemplified using real data either from survey research the social media platform Bluesky or a large digital newspaper archive Thematically these data are focused on current sociological topics particularly those related to human happiness energy transition and climate policy AI political attitudes and the rise in right wing voting Data science encompasses more than the algorithms required for data analysis and statistical learning No less relevant are the rules by which social research and data analysis are conducted data quality is ensured and the results are validated This textbook aims to provide this overview
