Statistical Inductive Probabilities:

Statistical and Inductive Probabilities Hugues Leblanc, 2012-01-27 This treatment addresses a decades old dispute among probability theorists asserting that both statistical and inductive probabilities may be treated as sentence theoretic measurements and that the latter qualify as estimates of the former 1962 edition **Inductive Logic** Davis Baird, 1992 A straightforward presentation of the four different statistical methods of inductive inference with discussion of the basic technical and mathematical material Methods are examined from both philosophical and critical standpoints **An Introduction to Probability and Inductive Logic** Ian Hacking, 2001-07-02 This is an introductory 2001 textbook on probability and induction written by one of the world's foremost philosophers of science The book has been designed to offer maximal accessibility to the widest range of students not only those majoring in philosophy and assumes no formal training in elementary symbolic logic It offers a comprehensive course covering all basic definitions of induction and probability and considers such topics as decision theory Bayesianism frequency ideas and the philosophical problem of induction The key features of this book are a lively and vigorous prose style lucid and systematic organization and presentation of ideas many practical applications a rich supply of exercises drawing on examples from such fields as psychology ecology economics bioethics engineering and political science numerous brief historical accounts of how fundamental ideas of probability and induction developed and a full bibliography of further reading Optimum Inductive Methods R. Festa, 2013-03-09 This book deals with a basic problem arising within the Bayesian approach 1 to scientific methodology namely the choice of prior probabilities The problem will be considered with special reference to some inference methods used within Bayesian statistics BS and the so called theory of inductive 2 probabilities T P In this study an important role will be played by the assumption defended by Sir Karl Popper and the supporters of the current verisimilitude theory VT that the cognitive goal of science is the achievement of a high degree of truthlikeness or verisimilitude A more detailed outline of the issues and objectives of the book is given in Section 1 In Section 2 the historical background of the Bayesian approach and the verisimilitude theory is briefly illustrated In Section 3 the methods used in TIP and BS for making multinomial inference are considered and some conceptual relationships between TIP and BS are pointed out In Section 4 the main lines of a new approach to the problem of the choice of prior probabilities are illustrated Lastly in Section 5 the structure of the book is described and a first explanation of some technical terms is provided **Statistical and Inductive Probability** Rudolf Carnap, 1955 *Foundations and Applications of Inductive Probability* Roger D. Rosenkrantz, 1981 *Symmetry and Its Discontents* S. L. Zabell, 2005-06-06 This volume contains essays on the history and philosophy of probability and statistics **Statistical and Inductive Probability** Rudolf Carnap, 1955 **Principles of Statistics** M. G. Bulmer, 2012-04-26 Concise description of classical statistics from basic dice probabilities to modern regression analysis Equal stress on theory and applications Moderate difficulty only basic calculus required Includes problems with answers *Lecture Series in*

Philosophy of Statistics, 2011-05-31 Statisticians and philosophers of science have many common interests but restricted communication with each other. This volume aims to remedy these shortcomings. It provides state of the art research in the area of philosophy of statistics by encouraging numerous experts to communicate with one another without feeling restricted by their disciplines or thinking piecemeal in their treatment of issues. A second goal of this book is to present work in the field without bias toward any particular statistical paradigm. Broadly speaking the essays in this Handbook are concerned with problems of induction, statistics and probability. For centuries foundational problems like induction have been among philosophers favorite topics, recently however non philosophers have increasingly taken a keen interest in these issues. This volume accordingly contains papers by both philosophers and non philosophers including scholars from nine academic disciplines. Provides a bridge between philosophy and current scientific findings. Covers theory and applications. Encourages multi disciplinary dialogue.

Geological Prior Information Andrew Curtis, Rachel Wood, 2004. Geological prior information represents a new and emerging field within the geosciences. Prior information is the term used to describe previously existing knowledge that can be brought to bear on a new problem. This volume describes a range of methods that can be used to find solutions to practical and theoretical problems using geological prior information and the nature of geological information that can be so employed.

The Emergence of Probability Ian Hacking, 2006-07-24. Historical records show that there was no real concept of probability in Europe before the mid seventeenth century although the use of dice and other randomizing objects was commonplace. Ian Hacking presents a philosophical critique of early ideas about probability, induction and statistical inference and the growth of this new family of ideas in the fifteenth, sixteenth and seventeenth centuries. Hacking invokes a wide intellectual framework involving the growth of science, economics and the theology of the period. He argues that the transformations that made it possible for probability concepts to emerge have constrained all subsequent development of probability theory and determine the space within which philosophical debate on the subject is still conducted. First published in 1975, this edition includes an introduction that contextualizes his book in light of developing philosophical trends. Ian Hacking is the winner of the Holberg International Memorial Prize 2009.
