**Statistical Distributions** Nick T. Thomopoulos, 2017-10-10 This book gives a description of the group of statistical distributions that have ample application to studies in statistics and probability Understanding statistical distributions is fundamental for researchers in almost all disciplines The informed researcher will select the statistical distribution that best fits the data in the study at hand Some of the distributions are well known to the general researcher and are in use in a wide variety of ways Other useful distributions are less understood and are not in common use The book describes when and how to apply each of the distributions in research studies with a goal to identify the distribution that best applies to the study The distributions are for continuous discrete and bivariate random variables In most studies the parameter values are not known a priori and sample data is needed to estimate parameter values In other scenarios no sample data is available and the researcher seeks some insight that allows the estimate of the parameter values to be gained This handbook of statistical distributions provides a working knowledge of applying common and uncommon statistical distributions in research studies These nineteen distributions are continuous uniform exponential Erlang gamma beta Weibull normal lognormal left truncated normal right truncated normal triangular discrete uniform binomial geometric Pascal Poisson hyper geometric bivariate normal and bivariate lognormal Some are from continuous data and others are from discrete and bivariate data This group of statistical distributions has ample application to studies in statistics and probability and practical use in real situations Additionally this book explains computing the cumulative probability of each distribution and estimating the parameter values either with sample data or without sample data Examples are provided throughout to guide the reader Accuracy in choosing and applying statistical distributions is particularly imperative for anyone who does statistical and probability analysis including management scientists market researchers engineers mathematicians physicists chemists economists social science researchers and students in many disciplines
