Improvement of Stochastic Optimization Through Learning for Complex Problems Lixin Su,2000 **Combining Regression Mean and Quantile Estimators** Kejia Shan,2007 **PAC-Bayesian Supervised Classification** Olivier Catoni,2007 This monograph deals with adaptive supervised classification using tools borrowed from statistical mechanics and information theory stemming from the PAC Bayesian approach pioneered by David McAllester and applied to a conception of statistical learning theory forged by Vladimir Vapnik Using convex analysis on the set of posterior probability measures we show how to get local measures of the complexity of the classification model involving the relative entropy of posterior distributions with respect to Gibbs posterior measures We then discuss relative bounds comparing the generalization error of two classification rules showing how the margin assumption of Mammen and Tsybakov can be replaced with some empirical measure of the covariance structure of the classification model We show how to associate to any posterior distribution an effective temperature relating it to the Gibbs prior distribution with the same level of expected

error rate and how to estimate this effective temperature from data resulting in an estimator whose expected error rate converges according to the best possible power of the sample size adaptively under any margin and parametric complexity assumptions We describe and study an alternative selection scheme based on relative bounds between estimators and present a two step localization technique which can handle the selection of a parametric model from a family of those We show how to extend systematically all the results obtained in the inductive setting to transductive learning and use this to improve Vapnik's generalization bounds extending them to the case when the sample is made of independent non identically distributed pairs of patterns and labels Finally we review briefly the construction of Support Vector Machines and show how to derive generalization bounds for them measuring the complexity either through the number of support vectors or through the value of the transductive or inductive margin Project Euclid website [The Annals of Statistics](#), 2007 *Annales de L'I.H.P.*, 2006 *Mathematical Methods of Statistics*, 2007 **Mathematical Reviews**, 2006 *Paris-Princeton Lectures on Mathematical Finance ...*, 2004 **Statistical Learning Theory and Stochastic Optimization** Olivier Catoni, 2004-08-25 Statistical learning theory is aimed at analyzing complex data with necessarily approximate models This book is intended for an audience with a graduate background in probability theory and statistics It will be useful to any reader wondering why it may be a good idea to use as is often done in practice a notoriously wrong i.e. over simplified model to predict estimate or classify This point of view takes its roots in three fields information theory statistical mechanics and PAC Bayesian theorems Results on the large deviations of trajectories of Markov chains with rare transitions are also included They are meant to provide a better understanding of stochastic optimization algorithms of common use in computing estimators The author focuses on non asymptotic bounds of the statistical risk allowing one to choose adaptively between rich and structured families of models and corresponding estimators Two mathematical objects pervade the book entropy and Gibbs measures The goal is to show how to turn them into versatile and efficient technical tools that will stimulate further studies and results [Statistical Learning Theory](#) Vladimir Naumovich Vapnik, 1998-09-30 Introduction The Problem of Induction and Statistical Inference Two Approaches to the Learning Problem Appendix to Chapter 1 Methods for Solving III Posed Problems Estimation of the Probability Measure and Problem of Learning Conditions for Consistency of Empirical Risk Minimization Principle Bounds on the Risk for Indicator Loss Functions Appendix to Chapter 4 Lower Bounds on the Risk of the ERM Principle Bounds on the Risk for Real Valued Loss Functions The Structural Risk Minimization Principle Appendix to Chapter 6 Estimating Functions on the Basis of Indirect Measurements Stochastic III Posed Problems Estimating the Values of Function at Given Points Perceptrons and Their Generalizations The Support Vector Method for Estimating Indicator Functions The Support Vector Method for Estimating Real Valued Functions SV Machines for Pattern Recognition SV Machines for Function Approximations Regression Estimation and Signal Processing Necessary and Sufficient Conditions for Uniform Convergence of Frequencies to Their Probabilities Necessary and Sufficient Conditions for
