Statistical Physics And Chaos In Fusion Plasmas:

Statistical Physics and Chaos in Fusion Plasmas C. W. Horton, Jr., Linda E. Reichl, 1984-04-24 Papers from twenty nine of the world's leading scientists investigate the statistical properties of nonlinear dynamical systems emphasizing their relation to the problem of plasma confinement A powerful new diagrammatic perturbation theory is presented for a first principles calculation of the Clump Kinetic equation and for the first time detailed calculations and experimental considerations describe the practical consequences of these correlations Unique to this book is the collection of works on the problem of long lived correlations in phase space of the Vlasov Poisson system A new method of computing Lyapunov exponents from experimental data and a method for calculating the splitting of periodic orbits in conservative systems are developed **Nonequilibrium Statistical Physics Problems in Fusion Plasmas** Institute of Plasma Physics,

This book is devoted to theoretical physics methods in the theory of excitable media. The analogy between biological excitable media and active media is well known in physics and this information gives impetus to the approach used in this book. This book is the result of investigations on excitable media theory carried out by the Institute of Electrochemistry during the last decade in the USSR. The entire theory is not complete but the fundamental investigator in this field will be rewarded with insights into the practical importance of the problem and the intrinsic beauty of the theory which may be seen in the application of the theory to specific problems. **Fractals and Chaotic Dynamics in Tectonics** Jie Huang, 1990
