Assessing Judgment Proficiency in Army Personnel Hannah Foldes, 2010 Because of the unpredictable nature of the Army s current conflicts operational requirements demand that Soldiers and leaders become proficient in military judgment and decision making This research presents an analysis of military judgment

proficiency MJP which is judgment and decision making in environments characterized by cultural legal ethical and tactical complexity We reviewed relevant literature in the areas of judgment decision making and problem solving to present a sound theoretical foundation for the MJP construct We defined MJP as a complex skill and argued that in ambiguous novel rapidly changing situations in which there is limited time information and resources Soldiers demonstrating MJP are more likely to select an effective course of action by appropriately identifying the nature of the situation recognizing relevant situational factors and forecasting the best overall outcome s given the situation We describe also the initial stages of development of an assessment tool that will distinguish among Soldiers on MJP and lay out future plans for test validation with Special Forces and non Special Forces Soldiers

**Critical Thinking** Varda Liberman, Amos Tversky, 2020-10-06 Life is fundamentally uncertain We do not know whether it will rain whether the market will go up or down whether our unhealthy eating choices will have serious consequences or whether terrorists will strike our city To make matters worse we also lack a tried and true procedure for evaluating the likelihood of such events Yet we are required to make decisions great and small that depend on these events In the absence of certainty or an objective procedure for estimating probabilities we must rely on our own reasoning which a great deal of research has shown to be less rational than we would like to believe In *Critical Thinking* Varda Liberman and Amos Tversky examine how we make judgments under uncertainty and explain how various biases can distort our consideration of evidence Using everyday examples they detail how to examine data and their implications with the goal of helping readers improve their intuitive reasoning and judgment From the courtroom to the basketball court cholesterol count to the existence of the supernatural Liberman and Tversky explore the fundamental insights of probability causal relationships and making inferences from samples They delve into the psychology of judgment explaining why first impressions are often wrong and correct answers go against our intuitions Originally written in Hebrew and published by the Open University in 1996 *Critical Thinking* is an essential guide for students and interested readers alike that teaches us to become more critical readers and consumers of information

*The Psychology and Law of Criminal Justice Processes* Roger J. R. Levesque, 2006 Psychological science now reveals much about the law s response to crime This is the first text to bridge both fields as it presents psychological research and theory relevant to each phase of criminal justice processes The materials are divided into three parts that follow a comprehensive introduction The introduction analyses the major legal themes and values that guide criminal justice processes and points to the many psychological issues they raise Part I examines how the legal system investigates and apprehends criminal suspects Topics

range from the identification searching and seizing to the questioning of suspects Part II focuses on how the legal system establishes guilt To do so it centres on the process of bargaining and pleading cases assembling juries providing expert witnesses and considering defendants mental states Part III focuses on the disposition of cases Namely that part highlights the process of sentencing defendants predicting criminal tendencies treating and controlling offenders and determining eligibility for such extreme punishments as the death penalty The format seeks to give readers a feeling for the entire criminal justice process and for the role psychological science has and can play in it

Improving Statistical Reasoning  
Peter Sedlmeier,1999-06-01 This book focuses on how statistical reasoning works and on training programs that can exploit people s natural cognitive capabilities to improve their statistical reasoning Training programs that take into account findings from evolutionary psychology and instructional theory are shown to have substantially larger effects that are more stable over time than previous training regimens The theoretical implications are traced in a neural network model of human performance on statistical reasoning problems This book appeals to judgment and decision making researchers and other cognitive scientists as well as to teachers of statistics and probabilistic reasoning

*Illusion of Due* Arthur Penhaligon,2026-02-26 On August 18 1913 at the Monte Carlo Casino the roulette ball landed on black Then it landed on black again And again By the fifteenth time in a row the crowd was in a frenzy Gamblers rushed to bet millions of francs on red absolutely convinced that after so many blacks red was mathematically due to hit It landed on black twenty six times in a row bankrupting everyone who believed the wheel had a memory This legendary disaster perfectly encapsulates the Gambler s Fallacy the deeply ingrained irrational belief that independent random events will somehow self correct Our brains are master pattern recognition machines evolutionarily designed to find meaning in chaos But when applied to sheer probability this survival trait becomes a devastating cognitive flaw We assume that flipping five tails in a row means a head is guaranteed next ignoring the cold fact that the coin does not remember the previous flips This eye opening psychological journey breaks down the math of probability and the biology of superstition It reveals how the Gambler s Fallacy sabotages far more than just casino bets severely corrupting how judges hand down sentences how investors buy stocks and how HR managers hire employees Break free from the illusion of destiny Learn to short circuit your brain s desperation for patterns embrace the cold reality of randomness and make logical decisions in a chaotic world

How to Make Better Decisions. Examples from Exploration  
Bernhard Seubert,2021-11-26 Scientific Essay from the year 2014 in the subject Psychology Industrial and organizational psychology grade A language English abstract Good decision making creates value for a company The decision to drill in the right place or not has strong economic repercussions Moreover the human approach to decision making can be flawed Many of the common flaws in decision making are related to heuristic factors that is by human ways of thinking and drawing conclusions These factors can negatively impact the outcomes of an exploration program This paper gives examples of cases in which geoscientific reasoning can lead to pitfalls and explores why this is so

The paper then discusses the merits of the multiple working hypotheses MWH concept as an aid to harnessing seemingly contradictory data relating to several often mutually exclusive interpretations or scenarios A simple method using a spreadsheet and decision tree analysis is proposed to quantify the outcomes of multiple scenarios The method is illustrated by a subsurface example in which two possible interpretations reef versus volcano are considered An outlook of Bayesian statistics and other methods is included

**Cognitive Science: Judgment and decision making** Koen Lamberts,2008

**Applied Statistics in Decision-making** George Kuttickal Chacko,1971 *Cognitive Psychology* Alan D. Baddeley,Niels Ole Bernsen,1989 The papers in this series of five volumes provide a snapshot of current trends in European Cognitive Science Each of the volumes deals with problems in cognitive science from a different perspective covering the interacting disciplines of cognitive psychology logic and linguistics human computer interaction neuroscience and artificial intelligence respectively Based on the analysis and exposition of the state of the art in their various fields of expertise the contributors take a prospective look at the basic research problems confronting cognitive science over the next five to ten years Whilst the authors and editors do consider a wide range of research in their area they have been encouraged to give their personal view of important directions rather than a bland comprehensive list Although inevitably controversial this approach allows a stimulating review of the field and one which should inspire debate The highly interdisciplinary nature of cognitive science research means that many issues such as natural language or vision are explored from diverse perspectives in papers representing different disciplines Each contribution has been written in a way which makes it comprehensible to colleagues from neighbouring disciplines as well as students of cognitive science It will be particularly useful to graduate students contemplating research projects The work has been supported and coordinated by the research unit FAST Forecast and Assessment in Science and Technology of the EEC Commission in Brussels
