

Though enrollment in the Harley project course was small, such limitations were the result of recruitment issues rather than course design. The course was planned for a full class composed of several small groups of students. Each group would work with the same data all semester, then contrast and compare their results to those of the other groups. Discussions between groups about data analysis techniques chosen, modifications made during the course of the semester, as well as final results would certainly have enriched the educational experience of the students.

### Conclusion

Real world projects in an elementary statistics course encourage active student participation and result in positive attitudes toward the subject itself and a better understanding of its usefulness. Allowing students some choice in determining topics of study as well using mini-projects motivates quality student work. Our students welcome an innovative learning/teaching environment such as being consultants for a local company, on-site visits, collaborative learning, extensive use of software and working on projects geared to major fields of study.
