Van Gogh's Sunflowers Illuminated Ella Hendriks, Marije Vellekoop, Maarten Bommel, Muriel Geldof, 2025-10-01 Vincent van Gogh's Sunflowers are seen by many as icons of Western European art. Two of these masterpieces, the first version painted in August 1888 at The National Gallery London and the painting made after it in January 1889 at Van Gogh Museum Amsterdam, have been the subject of a detailed comparison by an interdisciplinary team of experts. The pictures were examined in unprecedented depth using a broad array of techniques, including state-of-the-art non-invasive imaging analytical methods to look closely at and under the paint surface. Not only the making but also the subsequent history of the works was reconstructed, including later campaigns of restoration. The study's conclusions are set out in this book, along with the fascinating genesis of the paintings and the sunflower's special significance to Van Gogh. More than 30 authors, all specialists in the field of conservation science and art history, have contributed to the research and publication, presenting the outcomes of this unique project.

Advanced Green Composites Anil N. Netravali, 2018-10-02. Most composites, particularly those made using thermoset resins, cannot be recycled or reused. As a result, most of them end up in landfills at the end of their useful life, which is neither sustainable nor environment-friendly. Various laws enacted by governments around the world and heightened global awareness about sustainability and global warming is changing this situation. Significant research is being conducted in developing and utilizing sustainable fibers and resins, mostly derived from plant, to fabricate green composites. The significant progress in the past 20 or so years in this field has led to the development of green composites with high strength, or so-called advanced green composites. More interestingly, green composites have also acquired various different properties, such as fire resistance, transparency, barrier to gases, and others. The term advanced, which only included high strength and stiffness, now includes all these special properties. The world is on the cusp of a major change, and once fully developed, such composites could be used in applications ranging from automobiles to sporting goods, from circuit boards to housing, and from furniture to packaging. This book, by presenting the state-of-the-art developments in many aspects of advanced green composites, adds significantly to the knowledge base that is critical for their success in expanding their use in applications never seen before. The chapters are written by the world's leading researchers and present in-depth information in a simple way. This provides readers and researchers the latest developments in the field of green resins with ways of strengthening them.

**High Strength Green Fibers** including micro and nano cellulose fibrils, fibers, and green composites in the first few chapters. The introductory chapter summarizes the consequences of using conventional petroleum-based materials and the need for green composites, as well as the progress being made in this field. After that, the book delves into advanced green composites in a broader sense and includes chapters on High Strength Green Composites, Self-healing Green Composites, Transparent Green Composites, All-cellulose composites, Toughened Green Composites, Green Biofoams.

Bioinspired Shape Memory Composites etc The chapters are written by the experts who are highly respected in their fields
