- ▷ Multiple Windows 6
- ▽ Frames and X Windows 20

When using the X Window System, you can create multiple windows at the X level in a single Emacs session. Each X window that belongs to Emacs displays a **frame** which can contain one or several Emacs windows. A frame initially contains a single general-purpose Emacs window which you can subdivide vertically or horizontally into smaller windows. A frame normally contains its own echo area and minibuffer, but you can make frames that don't have these---they use the echo area and minibuffer of another frame.

Editing you do in one frame also affects the other frames. For instance, if you put text in the kill ring in one frame, you can yank it in another frame. If you exit Emacs through `C-x C-c` in one frame, it terminates all the frames. To delete just one frame, use `C-x 5 0`.

To avoid confusion, we reserve the word "window" for the subdivisions that Emacs implements, and never use it to refer to a frame.

- ▷ Mouse Commands for Editing
- ▷ Secondary Selection
- ▷ Following References with the Mouse
- ▽ Mouse Clicks for Menus

Mouse clicks modified with the CONTROL and SHIFT keys bring up menus.

`C-Mouse-1`

This menu is for selecting a buffer.

`C-Mouse-2`

This menu is for specifying faces and other text properties for editing formatted text. See [Formatted Text](#).

`C-Mouse-3`

This menu is mode-specific. For most modes, this menu has the same items as all the mode-specific menu bar menus put together. Some modes may specify a different menu for this button.*

`S-mouse-1`

This menu is for specifying the frame's default font.

*Some systems use Mouse-3 for a mode-specific menu. We took a survey of users, and found they preferred to keep Mouse-3 for selecting and killing regions. Hence the decision to use `C-Mouse-3` for this menu.
