The Bushbaby:

The Evolutionary Road to Human Memory Elisabeth A. Murray, Steven P. Wise, Mary Kelly Lorene Baldwin, Kim S. Graham, 2020 We tend to think about memory in terms of the human experience neglecting the fact that we can trace a direct line of descent from the earliest vertebrates to modern humans This book tells an intriguing story about how evolution shaped human memory

Primate Conservation Prince Rainer III, 2012-12-02 Primate Conservation provides a comprehensive discussion of the conservation of many species of nonhuman primates The problems of conservation are discussed by distinguished scientists who are experts in their knowledge of the animals they write about and who have firsthand knowledge of the problems of conserving them Animals ranging from Galago to the Gorilla have been selected to serve as examples of the types of problems that conservationists face The book begins by discussing the ecology of two species of galagine in South Africa It covers factors such as their distribution habitat population densities activity patterns feeding group structure and reproduction This is followed by separate chapters on the conservation of the following aye aye the lion tamarins of Brazil the Peruvian yellow tailed woolly monkey the toque macaque of Sri Lanka rare lion tailed monkey of South India rhesus monkeys in Northern India the gelada baboons the hanuman langur and douc langur red ouakaris black colobus monkeys lesser apes and eastern gorillas

The Evolution of Hemispheric Specialization in Primates William D. Hopkins, 2007-09-18 Hemispheric specialization and lateralized sensory cognitive or motor function of the left and right halves of the brain commonly manifests in humans as right handedness and left hemisphere specialization of language functions Historically this has been considered a hallmark of and unique to human evolution Some theories propose that human right handedness evolved in the context of language and speech while others that it was a product of the increasing motor demands associated with feeding or tool use In the past 20 25 years there has been a plethora of research in animals on the topic of whether population level asymmetries in behavioral processes or neuro anatomical structures exist in animals notably primates and people have begun to question the historical assumptions that hemispheric specialization is unique to humans This book brings together various summary chapters on the expression of behavioral and neuro anatomical asymmetries in primates Several chapters summarize entire families of primates while others focus on genetic and non genetic models of handedness in humans and how they can be tested in non human primates In addition it makes explicit links between various theoretical models of the development of handedness in humans with the observed patterns of results in non human primates A second emphasis is on comparative studies of handedness in primates There is now enough data in the literature across different species to present an evolutionary tree for the emergence of handedness and perhaps other aspects of hemispheric specialization such as neuro anatomical

asymmetries and its relation to specific morphological and ecological adaptations in various primate species The first treatment of this important topic since 1998 Examines the tenet that lateralization and handedness is a uniquely human character through evidence from higher and lower primates and with reference to other vertebrates Advances our understanding of the occurrence evolution and significance of lateralization and handedness effects **South African Gardening and Country Life** ,1929 **Summerland** Michael Chabon,2016-04-12 From the Pulitzer Prize winning Michael Chabon comes this bestselling novel for readers of all ages that blends fantasy and folklore with that most American coming of age ritual baseball now in a new edition with an original introduction by the author Ethan Feld is having a terrible summer his father has moved them to Clam Island Washington where Ethan has quickly established himself as the least gifted baseball player the island has ever seen Ethan s luck begins to change however when a mysterious baseball scout named Ringfinger Brown and a seven hundred and sixty five year old werefox enter his life dragging Ethan into another world called the Summerlands But this beautiful winter less place is facing destruction at the hands of the villainous Coyote and it has been prophesized that only Ethan can save it In this cherished modern classic the New York Times bestselling Pulitzer Prize winning author brings his masterful storytelling dexterous plotting and singularly envisioned characters to a coming of age novel for readers of all ages *The Comparative Anatomy of the Cerebellum of the Lesser Bush Baby (Galago Sonegalensis) and the Tree Shrew (Tupaia Glis)* Duane E.
