A Concise Review. Dr. Hakim. K. Saboowala, 2022-04-10 What is Cancer syndrome or Family cancer syndrome A Concise Review A cancer syndrome or family cancer syndrome is a genetic disorder in which inherited genetic mutations in one or more genes predispose the affected individuals to the development of cancers and may also cause the early onset of these cancers There are many family cancer syndromes For HNPCC FAP and hereditary breast and ovarian cancer the data available so far demonstrate that the existing early detection programs provide benefits for mutation carriers It is therefore important to identify these persons at an early stage and enrol them in an appropriate screening program This task devolves mainly upon primary care physicians For further management it is advisable to refer patients to a specialized centre experienced in these relatively uncommon clinical entities An attempt has been made in this E Booklet to discuss some of the syndromes briefly as examples along with plenty of illustrations and a table but this is not a full list Dr H K Saboowala M B Bom M R S H London **Principles of Clinical Cancer Genetics** Daniel C. Chung, Daniel A. Haber, 2010-07-20 Advances in genetics are transforming estimates of an individual's risk of developing cancer and approaches to prevention and management of cancer in those who may have increased susceptibility Identifying and caring for patients with hereditary cancer syndromes and their family members present a complex clinical scientific and social challenge This textbook by leading experts at Massachusetts General Hospital Cancer Center highlights the current understanding of the genetics of hereditary cancers of the breast ovary colorectum stomach pancreas kidney skin and endocrine organs Practical guidelines for the use of genetic testing cancer screening and surveillance prophylactic surgery and promising targeted therapeutic agents are discussed In addition ongoing research
