Measuring Supply Chain Carbon Efficiency Anthony J. Craig, Massachusetts Institute of Technology. Engineering Systems Division, 2012 In the near term efficiency improvements represent a key option for reducing the impacts of climate change The growing awareness of climate change has increased the attention regarding the carbon emissions embedded in the products we consume This increased attention creates a need to measure and improve the carbon efficiency of the supply chains that produce those goods In this thesis we present a method for measuring the carbon efficiency of a supply chain that recognizes the decentralized nature of supply chains First drawing from concepts in supply chain performance measurement and eco efficiency we propose a definition of supply chain carbon efficiency that is consistent with the idea of a product s carbon footprint We present Life Cycle Assessment LCA a method for quantifying the environmental impact of a product or service as the appropriate method of measuring a product s carbon footprint and demonstrate the use of LCA through a case study involving the supply chain of bananas Next we characterize the difficulty and uncertainty in performing an LCA of a supply chain through an analysis of our case study of bananas We present a

framework to reduce the uncertainty though the concept of a carbon label The carbon label provides a system where firms can measure the carbon footprint of their activities and share this information with their supply chain partners We identify the role of third parties in facilitating information sharing and define the characteristics that describe the carbon label Finally we demonstrate how the carbon label works in the context of the supply chain Through an analysis of the mode and carrier assignment steps in an integrated supply chain we develop new metrics that show how sharing information can increase the accuracy of the measured carbon footprint and improve decision making We provide incentive for firms to share information through the development of a vertical differentiation model of product carbon labels Our model shows how consumer demand for lower carbon products drives reductions in the carbon footprint throughout the supply chain and induces firms to voluntarily disclose their carbon footprint

Carbon Footprint and the Industrial Life Cycle Roberto Álvarez Fernández, Sergio Zubelzu, Rodrigo Martínez, 2017-05-28 This book analyzes the relationship between large scale industrial activity and the carbon footprint and provides a theoretical framework and tools to calculate the carbon footprint of industrial activities at every stage of their life cycles including urban planning master plans recycling activities project and building stages as well as managing and manufacturing Discussing the main preventative and corrective measures that can be utilized it includes case studies reports on technological developments and examples of successful policies to provide inspiration to readers This book collects the contributions of authors from four continents in order to analyze from as many as possible points of view and using many different approaches the problem of sustainability in today s globalized world

Frameworks ,2007 Wisconsin Greenhouse Gas Emissions Inventory ,1993 *ASSESSMENT OF HOUSEHOLD CARBON FOOTPRINT REDUCTION POTENTIALS.* ,2009 The term household carbon footprint refers to the total annual carbon emissions associated with household consumption of energy goods and services In this project Lawrence Berkeley National Laboratory developed a carbon footprint modeling framework that characterizes the key underlying technologies and processes that contribute to household carbon footprints in California and the United States The approach breaks down the carbon footprint by 35 different household fuel end uses and 32 different supply chain fuel end uses This level of end use detail allows energy and policy analysts to better understand the underlying technologies and processes contributing to the carbon footprint of California households The modeling framework was applied to estimate the annual home energy and supply chain carbon footprints of a prototypical California household A preliminary assessment of parameter uncertainty associated with key model input data was also conducted To illustrate the policy relevance of this modeling framework a case study was conducted that analyzed the achievable carbon footprint reductions associated with the adoption of energy efficient household and supply chain technologies Ethical Corporation Magazine ,2009-07 **Philosophical Transactions of the Royal Society of London** ,2008 Each issue of Transactions B is devoted to a specific area of the biological sciences including clinical science All papers are peer reviewed and edited to the highest standards Published on

the 29th of each month Transactions B is essential reading for all biologists
