Issues d'une autre classe pharmaceutique, les fibrates sont aujourd'hui utilisés dans le traitement des hypertriglycéridémies, également impliqués dans les maladies vasculaires. Aussi étudie-t-on actuellement les possibilités d'association des fibrates et des statines dans le traitement des pathologies résistants. Cet ouvrage passionnant rédigé par un des plus grands spécialistes français des maladies cardiovasculaires décrit ainsi les principes d'une médecine nouvelle. D'abord, il aborde dans un second temps l'état des recherches portant sur le long terme, laissant apparaître de nouveaux concepts thérapeutiques faisant appel à l'utilisation des génés et par conséquent la thérapie génique. Reconnues comme figurant parmi les maladies les plus répandues dans les pays industrialisés, les maladies cardiovasculaires vont sans doute connaître dans les années venant une révolution dans leur approche thérapeutique. La déficience de certains génés pourra être corrigée par la thérapie génique et le recours médicamenteux des molécules de pointe pourra sans doute ralentir considérablement le développement de l'athérosclérose. Cet ouvrage décrit avec soin et précision les nouvelles formes de cette médecine du futur. *Livrehebdo*, 2001 **Nouveau Paris Match**, 2006-03
