Selected Papers on Differential Equations and Analysis, 2005 Contains translations of papers that originally appeared in the Japanese journal Sugaku This book covers a variety of topics including differential equations with free boundary singular integral operators and operator algebras It is suitable for graduate students and research mathematicians interested in analysis and differential equations

Quantum Information Theory Masahito Hayashi, 2016-11-03 This graduate textbook provides a unified view of quantum information theory Clearly explaining the necessary mathematical basis it merges key topics from both information theoretic and quantum mechanical viewpoints and provides lucid explanations of the basic results Thanks to this unified approach it makes accessible such advanced topics in quantum communication as quantum teleportation superdense coding quantum state transmission quantum error correction and quantum encryption Since the publication of the preceding book Quantum Information An Introduction there have been tremendous strides in the field of quantum information In particular the following topics all of which are addressed here made seen major advances quantum state discrimination quantum channel capacity bipartite and multipartite entanglement security analysis on quantum communication reverse Shannon theorem and uncertainty relation With regard to the analysis of quantum security the present book employs an improved method for the evaluation of leaked information and identifies a remarkable relation between quantum security and quantum coherence Taken together these two improvements allow a better analysis of quantum state transmission In addition various types of the newly discovered uncertainty relation are explained Presenting a wealth of new developments the book introduces readers to the latest advances and challenges in quantum information To aid in understanding each chapter is accompanied by a set of exercises and solutions

Risk, Ambiguity and Decision Daniel Ellsberg, 2015-07-03 Ellsberg elaborates on Risk Ambiguity and the Savage Axioms and mounts a powerful challenge to the dominant theory of rational decision in this book

Mathematical Theory of Reliability of Time Dependent Systems with Practical Applications Igor N. Kovalenko, Philip A. Pegg, 1997-07-16 One of the greatest problems in engineering is reliability The performance of all machinery degrades over time and unless counteraction is taken at some point any system will eventually fail Once a system fails there are a number of possible solutions the mathematical and statistical measurement and analysis of these solutions forms the mathematical theory of reliability The aim of the authors is to concentrate on aspects of particular importance in the mathematical theory of reliability of time dependent systems rather than give a general overview Particular emphasis is placed on fault tree analysis Monte Carlo methods and importance measures This book will be of particular interest to applied researchers and engineers working in areas where reliability is crucial Contents Introduction Markov and Semi Markov models as a basis for the mathematical analysis of system reliability methods for investigating homogeneous and non homogeneous point processes event flows fault trees the current state of research theory of redundant systems Monte Carlo methods reliability analysis

using perturbation methods stiff processes in reliability analysis variance reduction methods analytical statistical methods for rapid simulation of repairable systems with structure redundancy measures of reliability importance of components index

Survival Analysis with Long-Term Survivors Ross A. Maller,Xian Zhou,1996 The aim of this book is to suggest and exemplify a systematic methodology for analysing survival data which contains immune or cured individuals denoted generically as long term survivors Such data occurs in medical and epidemiological applications where the intention may be to identify whether or not cured or immune individuals are present in a population perhaps as a result of treatments given in the analysis of recidivism data in criminology where the intentions are similar with respect to prisoners released from and possibly returning to prison and in many other areas where followup data is available on individuals with the possibility that not all suffer the event under investigation Both nonparametric and parametric methods are proposed and developed The effects of covariate information can be assessed via a kind of generalised linear framework in the parametric analyses The proposed methodologies are supported by asymptotic analyses and simulations of real situations While these theoretical underpinnings are presented in reasonable rigour and detail the book is aimed very much at the practitioner who wishes to analyse survival data with or even without immunes
