F. Singer, 2005 This collection constitutes an essential sourcebook for researchers producers and users seeking technical information on materials with foam like structures The collection is unique in that it brings together people from the fields of metals and polymers Both material types derive their advantageous properties from a cellular structure These properties include low weight high specific stiffness and strength excellent energy absorption capacity as well as damping and insulation properties On the other hand the processing of metals is far more difficult due to the higher temperatures involved Another important factor is the faster decay of metal foam structures at the end of the foaming process because of their combination of high surface tension and low viscosity The differences in

foamability between metals and polymers explain why cellular plastics have been widely used for some time whereas cellular metals have only recently found their first applications The present volume expertly reviews the known scientific results in these fields particularly with regard to the understanding of foam processing e g mechanisms of stabilization as well as foam properties e g the material s response to fatigue and crash situations This collection constitutes an essential sourcebook for researchers producers and users seeking technical information on materials with foam like structures The 63 papers of this proceedings were first presented at the Symposium on Cellular Metals and Polymers sponsored by the Deutsche Forschungsgemeinschaft in October 2004 in F rth Germany Also included are reports from the DFG program on Cellular Metals Keynote talks were given on topics that include an overview of the mechanical properties of foams and periodic lattice materials physics of polymer foams and the role of rheology in foaming polymers The papers are grouped into sections including processes of metal foams properties of metal foams particle foams and simulation component fabrication and application of metal foams and commercial applications and products of polymer foams The volume is illustrated with b w plates and contains an author

Selection Bias and Covariate Imbalances in Randomized Clinical Trials Vance Berger,2005-05-27 Baseline data in clinical trials consists of information regarding patients that is measured at the outset prior to randomization or treatment with study medications In studies where important baseline factors appear well balanced it can be reasonably concluded that any differences in outcome between the intervention and control groups are a real effect of treatment The common assumption that any baseline differences in a randomized study are necessarily random is however misplaced Selection bias can and does occur even in randomized clinical trials Steps need to be taken in order to ensure that this does not compromise the integrity of clinical trials hence *Selection Bias and Covariate Imbalances in Randomized Clinical Trials* offers the first comprehensive treatment of the subject and the methodology involved Provides an overview of the hierarchy of study designs and justifies the position of randomized trials at the top of this hierarchy Discusses the strengths and defects of randomization and provides real evidence to justify concern regarding its defects Outlays the damaging consequences that selection bias causes when it does occur Considers courses of action that can be taken to manage contain the problem Presents methods that can be used to detect selection bias in randomized trials and methods to correct for selection bias Concludes by providing a comprehensive plan for managing baseline imbalances and selection bias in randomized trials and proposing open problems for future research *Selection Bias and Covariate Imbalances in Randomized Clinical Trials* provides an in depth overview of a key aspect in the design and analysis of clinical trials featuring modern and novel approaches to the methodology described Illustrated with case studies this book introduces groundbreaking ideas and research that will be invaluable to researchers and practitioners who design and analyse clinical trials It will also be of interest to graduate students within the field of biostatistics
