Statistics for Linguists David Eddington, 2016-01-14 Linguists with no background in statistics will find this book to be an accessible introduction to statistics Concepts are explained in non technical terms and mathematical formulas are kept to a minimum The book incorporates SPSS which is a statistics package that incorporates a point and click interface rather than complex line commands Step by step instructions are provided for some of the most widely used statistics in linguistics At the same time the concepts behind each procedure are also explained Traditional analyses such as ANOVA and t tests are included in the book but linguistic data is often not amenable to such analyses For this reason non parametric and mixed effects procedures are also introduced [Statistics for Linguistics with R](#) Stefan Thomas Gries, 2013 This book is the revised and extended second edition of *Statistics for Linguistics with R* The comprehensive revision includes new small sections on programming topics that facilitate statistical analysis the addition of a variety of statistical functions readers can apply to their own data and a revision of overview sections on statistical tests and regression modeling The main revision is a complete rewrite of the chapter on multifactorial approaches which now contains sections on linear regression binary and ordinal logistic regression multinomial and Poisson regression and repeated measures ANOVA The revisions are completed by a new visual tool to identify the right statistical test for a given problem and data set **Statistics for Linguistics with R** Stefan Th. Gries, 2009-12-15 This book is an introduction to statistics for linguists using the open source software R It is aimed at students and instructors professors with little or no statistical background and is written in a non technical and reader friendly accessible style It first introduces in detail the overall logic underlying quantitative studies exploration hypothesis formulation and operationalization and the notion and meaning of significance tests It then introduces some basics of the software R relevant to statistical data analysis A chapter on descriptive statistics explains how summary statistics for frequencies averages and correlations are generated with R and how they are graphically represented best A chapter on analytical statistics explains how statistical tests are performed in R on the basis of many different linguistic case studies For nearly every single example it is explained what the structure of the test looks like how hypotheses are formulated explored and tested for statistical significance how the results are graphically represented and how one would summarize them in a paper article A chapter on selected multifactorial methods introduces how more complex research

designs can be studied methods for the study of multifactorial frequency data correlations tests for means and binary response data are discussed and exemplified step by step Also the exploratory approach of hierarchical cluster analysis is illustrated in detail The book comes with many exercises boxes with short think breaks and warnings recommendations for further study and answer keys as well as a statistics for linguists newsgroup on the companion website The volume is aimed at beginners on every level of linguistic education undergraduate students graduate students and instructors professors and can be used in any research methods and statistics class for linguists It presupposes no quantitative statistical knowledge whatsoever and unlike most competing books begins at step 1 for every method and explains everything explicitly

How to do Linguistics with R Natalia Levshina,2015-11-25 This book provides a linguist with a statistical toolkit for exploration and analysis of linguistic data It employs R a free software environment for statistical computing which is increasingly popular among linguists How to do Linguistics with R Data exploration and statistical analysis is unique in its scope as it covers a wide range of classical and cutting edge statistical methods including different flavours of regression analysis and ANOVA random forests and conditional inference trees as well as specific linguistic approaches among which are Behavioural Profiles Vector Space Models and various measures of association between words and constructions The statistical topics are presented comprehensively but without too much technical detail and illustrated with linguistic case studies that answer non trivial research questions The book also demonstrates how to visualize linguistic data with the help of attractive informative graphs including the popular ggplot2 system and Google visualization tools This book has a companion website <http://doi.org/10.1075/z195> website
