Applied Statistics for the Social and Health Sciences

Rachel A. Gordon, 2012-07-26 Applied Statistics for the Social and Health Sciences provides graduate students in the social and health sciences with the basic skills that they need to estimate, interpret, present and publish statistical models using contemporary standards. The book targets the social and health science branches such as human development, public health, sociology, psychology, education and social work in which students bring a wide range of mathematical skills and have a wide range of methodological affinities. For these students a successful course in statistics will not only offer statistical content but will also help them develop an appreciation for how statistical techniques might answer some of the research questions of interest to them. This book is for use in a two semester graduate course sequence covering basic univariate and bivariate statistics and regression models for nominal and ordinal outcomes in addition to covering ordinary least squares regression. Key features of the book include interweaving the teaching of statistical concepts with examples developed for the course from publicly available social science data or drawn from the literature, thorough integration of teaching statistical theory with teaching data processing and analysis, teaching of both SAS and Stata side by side and use of chapter exercises in which students practice programming and interpretation on the same data set and course exercises in which students can choose their own research questions and data set. This book is for a two semester course. For a one semester course see <http://www.routledge.com/9780415991544>

Statistics for the Social Sciences R. Mark Sirkin, 2006 Popular in previous editions this

Third Edition continues to help build students confidence and ability in doing statistical analysis by slowly moving from concepts that require little computational work to those that require more. Author R Mark Sirkin once again demonstrates how statistics can be used so that students come to appreciate their usefulness rather than fear them. Statistics for the Social Sciences emphasizes the analysis and interpretation of data to give students a feel for how data interpretation is related to the methods by which the information was obtained.

The Norton History of the Human Sciences Roger Smith, 1997

A comprehensive history of the human sciences: psychology, sociology, anthropology, economics and political science from their precursors in early human culture to the present. This erudite yet accessible volume in Norton's highly praised History of Science series tracks the long and circuitous path by which human beings came to see themselves and their societies as scientific subjects like any other. Beginning with the Renaissance's rediscovery of Greek psychology, political philosophy and ethics, Roger Smith recounts how the human sciences gradually organized themselves around a scientific conception of psychology and how this trend has continued to the present day in a circle of interactions between science and ordinary life in which the human sciences have influenced and been influenced by popular culture.

Applied Data-Centric Social

Sciences Aki-Hiro Sato, 2014-07-29 Applied data centric social sciences aim to develop both methodology and practical applications of various fields of social sciences and businesses with rich data. Specifically in the social sciences a vast amount

of data on human activities may be useful for understanding collective human nature In this book the author introduces several mathematical techniques for handling a huge volume of data and analysing collective human behaviour The book is constructed from data oriented investigation with mathematical methods and expressions used for dealing with data for several specific problems The fundamental philosophy underlying the book is that both mathematical and physical concepts are determined by the purposes of data analysis This philosophy is shown throughout exemplar studies of several fields in socio economic systems From a data centric point of view the author proposes a concept that may change people s minds and cause them to start thinking from the basis of data Several goals underlie the chapters of the book The first is to describe mathematical and statistical methods for data analysis and toward that end the author delineates methods with actual data in each chapter The second is to find a cyber physical link between data and data generating mechanisms as data are always provided by some kind of data generating process in the real world The third goal is to provide an impetus for the concepts and methodology set forth in this book to be applied to socio economic systems
