Sun And Earth:

The Sun, the Earth, and Near-earth Space John A. Eddy, 2009 This book was made possible by NASA Living With a Star grant number NNG06EC631 *Sun, Earth and Sky* Kenneth R. Lang, 2007-12-31 Written in a light and friendly style this lavishly illustrated book introduces the Sun and its physics and describes all aspects of the Sun's interaction with us on Earth The second edition of this book updates the popular text by providing comprehensive accounts of the most recent discoveries made by five modern solar spacecraft during the past decade It contains a number of images never before seen in print Breakthrough observations with the underground Sudbury Neutrino Observatory are also included The new edition further provides modern interpretations of ozone depletion and global warming

Sun-Earth Plasma Connections James L. Burch, Robert L. Carovillano, Spiro K. Antiochos, 1999-01-26 Published by the American Geophysical Union as part of the Geophysical Monograph Series Volume 109 The Sun and the terrestrial magnetosphere have been the subjects of active research since the dawn of the space age The capabilities of observing both systems with greater and greater detail evolved separately until the 1980s when it was realized that definitive results on the connection between the Earth and the Sun would require a concerted and joint effort It was also realized that sophisticated solar terrestrial research communities existed within all the space-faring nations of the world and that no one of them could launch such an effort by itself This realization led to the creation of the International Solar Terrestrial Physics (ISTP) program which now comprises at least 12 spacecraft and includes extensive ground-based observations and theory and modeling efforts
