Sunset, 1913 **The Call of the Mate** C. Francis Burton, 1917 The Gay Gnani of Gingalee, Or, Discords of Devolution Florence Chance Huntley, 1908 **Everybody's**, 1924 *Observations and Predictions of Eclipse Times by Early Astronomers* J.M. Steele, 2013-04-17

Eclipses have long been seen as important celestial phenomena whether as omens affecting the future of kingdoms or as useful astronomical events to help in deriving essential parameters for theories of the motion of the moon and sun This is the first book to collect together all presently known records of timed eclipse observations and predictions from antiquity to the time of the invention of the telescope In addition to cataloguing and assessing the accuracy of the various records which come from regions as diverse as Ancient Mesopotamia China and Europe the sources in which they are found are described in detail Related questions such as what type of clocks were used to time the observations how the eclipse predictions were made and how these prediction schemes were derived from the available observations are also considered The results of this investigation have important consequences for how we understand the relationship between observation and theory in early science and the role of astronomy in early cultures and will be of interest to historians of science astronomers and ancient and medieval historians Science in Action 5 Louise Petheram, 2004-02 Full coverage of the QCA Scheme of Work for Science in a copiable book for Year 5 pupils age 9 to 10 Lesson plans copiable pupil activities assessment tests and extension activities are included Great value Full coverage of KS1 QCA Scheme of Work Fully photocopiable A whole years work included in each book Extension activities Assessment tests Lesson plans *Documents of the Assembly of the State of New York* New York (State). Nielsen, Haritz Arrizabalaga, Nuno Fragoso, Alistair Hobday, Molly Lutcavage, John Sibert, 2009-06-10 The 2nd international tagging and tracking symposium was held in San Sebastian Spain in October 2007 seven years after the first symposium was held in Hawaii in 2000 Sibert and Nielsen 2001 In the intervening

seven years there have been major advances in both the capability and reliability of electronic tags and analytical approaches for geolocation of tagged animals in marine habitats. Advances such as increased data storage capacity, sensor development, and tag miniaturization have allowed researchers to track a much wider array of marine animals, not just large and charismatic species. Importantly, data returned by these tags are now being used in population analyses and movement simulations that can be directly utilized in stock assessments and other management applications. Papers in this volume are divided into three sections: the first describing insights into behavior achieved using acoustic archival and novel tags; the second reporting on advances in methods of geolocation; while the final section includes contributions where tag data have been used in management of marine species. Accurate documentation of animal movements and behaviors in critical marine habitats are impossible to obtain with other technologies. The management and conservation of marine species are critical in today's changing ocean environment, and as electronic tags become more accurate and functional for a diversity of organisms, their application continues to grow, setting new standards in science and technology.

Solar and Infrared Radiation Measurements, Second Edition Frank Vignola, Joseph Michalsky, Thomas Stoffel, 2019-07-30

The rather specialized field of solar and infrared radiation measurements has become increasingly important due to the increased demands by the renewable energy and climate change research communities for data with higher accuracy and increased temporal and spatial resolutions. Recent advances in radiometry measurement systems and information dissemination also have increased the need for refreshing the literature available for this topic. This book provides the reader with an up-to-date review of the important aspects of solar and infrared radiation measurements: radiometer design, equipment installation, operation, maintenance, and calibration; data quality assessment parameters; and the knowledge necessary to properly interpret and apply the measured data to a variety of topics. Each of the authors has more than 40 years of experience with this subject, primarily as the result of developing and operating multiple measurement stations, working with the industry to improve radiometry, and conducting various research projects. The book's scope and subject matter have been designed to help a wide audience gain a general understanding of this subject and to serve as a technical reference. A student new to the field will benefit from the review of terminology and the historical perspective for radiometry before addressing more detailed topics in radiometry that we hope will be of interest to the more experienced reader. Describes the strengths and weaknesses of irradiance instruments. Provides detailed information on how to assess uncertainty in measurements. Offers comprehensive background information needed to understand the use of solar instrumentation. Discusses design concepts for shadowband radiometers, sky imagers, and satellite-based estimates of solar irradiance at the Earth's surface. Includes chapter-end questions, references, and useful links.
