Data from the UK show 1 in 124 obese women get results using this method, meaning the nutrition guidelines some professionals are following have a 99.5% fail rate. A quick goggle of what happened to the contestants on the hit TV series *The Biggest Loser* should be enough to put you off this method. This show is a classic example of why moving more and eating less only works in the short term, if at all. There is a reason there are few reunion shows. So why are low calorie diets flawed? A study on 14 contestants on the *biggest loser* show revealed some alarming results six years after filming had finished. The initial results were impressive, but as the study showed, they were short-lived. Below are results of some of the factors tested: Weight: Average weight before filming: 328 lb (148 kg), Average weight after 30 weeks on the show: 199 lb (90 kg), Average weight six years after final: 290 lb (131 kg). As you can see, contestants lost a massive amount of weight during filming, but struggled to maintain the weight loss over a long period of time. **Download Now!** To find out why the contestants couldn't keep the weight off and how to prevent it happening to you. **Intermittent Fasting for Beginners** Sandra Neel, 2023-12-15.
