Technology in World Civilization Arnold Pacey,1991-07-01 Most general histories of technology are Eurocentrist focusing on a main line of Western technology that stretches from the Greeks is through the computer In this very different book Arnold Pacey takes a global view placing the development of technology squarely in a world civilization He portrays the process as a complex dialectic by which inventions borrowed from one culture are adopted to suit another **Technology**

in World Civilization, revised and expanded edition Arnold Pacey,Francesca Bray,2021-08-03 The new edition of a milestone work on the global history of technology This milestone history of technology first published in 1990 and now revised and expanded in light of recent research broke new ground by taking a global view avoiding the conventional Eurocentric perspective and placing the development of technology squarely in the context of a world civilization Case studies include technological dialogues between China and West Asia in the eleventh century medieval African states and the Islamic world and the United States and Japan post 1950 It examines railway empires through the examples of Russia and Japan and explores current synergies of innovation in energy supply and smartphone technology through African cases The book uses the term technological dialogue to challenges the top down concept of technology transfer showing instead that technologies are typically modified to fit local needs and conditions often triggering further innovation The authors trace these encounters and exchanges over a thousand years examining changes in such technologies as agriculture firearms printing electricity and railroads A new chapter brings the narrative into the twenty first century discussing technological developments including petrochemicals aerospace and digitalization from often unexpected global viewpoints and asking what new kind of industrial revolution is needed to meet the challenges of the Anthropocene *Technology in World Civilization in a Thousand History* Arnold Pacey,1990 [Bulletin of the Atomic Scientists](#) ,1991-06 The Bulletin of the

Science and Technology in World History James E. McClellan III, Harold Dorn, 2015-12-15 Arguably the best general history of science and technology ever published Tracing the relationship between science and technology from the dawn of civilization to the early twenty first century James E McClellan III and Harold Dorn s bestselling book argues that technology as applied science emerged relatively recently as industry and governments began funding scientific research that would lead directly to new or improved technologies McClellan and Dorn identify two great scientific traditions the useful sciences which societies patronized from time immemorial and the exploration of questions about nature itself which the ancient Greeks originated The authors examine scientific traditions that took root in China India and Central and South America as well as in a series of Near Eastern empires in late antiquity and the Middle Ages From this comparative perspective McClellan and Dorn survey the rise of the West the Scientific Revolution of the seventeenth century the Industrial Revolution and the modern marriage of science and technology They trace the development of world science and technology today while raising provocative questions about the sustainability of industrial civilization This new edition of *Science and Technology in World History* offers an enlarged thematic introduction and significantly extends its treatment of industrial civilization and the technological supersystem built on the modern electrical grid The Internet and social media receive increased attention Facts and figures have been thoroughly updated and the work includes a comprehensive Guide to Resources incorporating the major published literature along with a vetted list of websites and Internet resources for students and lay readers

Technology: A World History Daniel R. Headrick, 2009-04 *Technology A World History* offers a brilliant history of invention around the globe Historian Daniel R Headrick ranges from the Stone Age and the beginnings of agriculture to the Industrial Revolution and the electronic revolution of the recent past In tracing the growing power of humans over nature through increasingly powerful innovations he compares the evolution of technology in different parts of the world providing a much broader account than is found in other histories of technology

Encyclopaedia of the History of Science, Technology, and Medicine in Non-Western Cultures Helaine Selin, 1997-07-31 The Encyclopaedia fills a gap in both the history of science and in cultural studies Reference works on other cultures tend either to omit science completely or pay little attention to it and those on the history of science almost always start with the Greeks with perhaps a mention of the Islamic world as a translator of Greek scientific works The purpose of the Encyclopaedia is to bring together knowledge of many disparate fields in one place and to legitimize the study

of other cultures science Our aim is not to claim the superiority of other cultures but to engage in a mutual exchange of ideas The Western academic divisions of science technology and medicine have been united in the Encyclopaedia because in ancient cultures these disciplines were connected This work contributes to redressing the balance in the number of reference works devoted to the study of Western science and encourages awareness of cultural diversity The Encyclopaedia is the first compilation of this sort and it is testimony both to the earlier Eurocentric view of academia as well as to the widened vision of today There is nothing that crosses disciplinary and geographic boundaries dealing with both scientific and philosophical issues to the extent that this work does xi PERSONAL NOTE FROM THE EDITOR Many years ago I taught African history at a secondary school in Central Africa
