from Chlorinated Polyethylene Gennady Zaikov, Donskoi, Shashkina, 2023-01-06 This new volume in the book series New Concepts in Polymer Science focuses on the problem of creating materials with reduced combustibility as well as the use of polymeric materials for protection from fire or overheating. The majority of polymeric materials are combustible, which has led to the development of polymers and materials based on these with reduced combustibility. However, the combustibility degree or their ability to protect from fire or high temperature can be indicated only in particular cases of combustion. In this volume, the results of the development of physicochemical bases for creating organic polymeric materials with reduced combustibility, which are capable of protecting against high temperatures, are discussed. A presentation of chlorinated polyolefins as organic polymers with reduced combustibility is also given. **Science and Technology of Polymers and Advanced Materials** Paras N. Prasad, 1998-09-30 Comprises state of the art research presented at the January 1997 conference. Seventy-eight articles discuss composites and blends, high performance materials for electronics and photonics, biomaterial and biotechnology, degradation, stabilization and recycling of materials, and environmentally friendly processing, sol-gel processed materials, advanced materials from natural and petroleum products, materials for separation technology, educational needs and trends, and business opportunities.
